<i>Preface</i>	v
1. Finite-dimensional modules	1
1.1 The Lie algebra \mathfrak{sl}_2 and \mathfrak{sl}_2 -modules	1
1.2 Classification of simple finite-dimensional modules	5
1.3 Semi-simplicity of finite-dimensional modules	10
1.4 Tensor products of finite-dimensional modules	15
1.5 Unitarizability of finite-dimensional modules	17
1.6 Bilinear forms on tensor products	21
1.7 Addenda and comments	23
1.8 Additional exercises	26
2. The universal enveloping algebra	33
2.1 Construction and the universal property	33
2.2 Poincaré–Birkhoff–Witt Theorem	37
2.3 Filtration on $U(\mathfrak{g})$ and the associated graded algebra	41
2.4 Centralizer of \mathfrak{h} and center of $U(\mathfrak{sl}_2)$	44
2.5 Harish-Chandra homomorphism	48
2.6 Noetherian property	50
2.7 Addenda and comments	52
2.8 Additional exercises	56
3. Weight modules	59
3.1 Weights and weight modules	59
3.2 Verma modules	62
3.3 Dense modules	68

3.4	Classification of simple weight modules	72
3.5	Coherent families	75
3.6	Category of all weight modules with finite-dimensional weight spaces	82
3.7	Structure of $\overline{\mathfrak{W}}^{\xi, \tau}$ in the case of one simple object	85
3.8	Structure of $\overline{\mathfrak{W}}^{\xi, \tau}$ in the case of two simple objects	86
3.9	Structure of $\overline{\mathfrak{W}}^{\xi, \tau}$ in the case of three simple objects . . .	90
3.10	Tensoring with a finite-dimensional module	92
3.11	Duality	101
3.12	Addenda and comments	103
3.13	Additional exercises	108
4.	The primitive spectrum	115
4.1	Annihilators of Verma modules	115
4.2	Simple modules and central characters	117
4.3	Classification of primitive ideals	119
4.4	Primitive quotients	121
4.5	Centralizers of elements in primitive quotients	124
4.6	Addenda and comments	128
4.7	Additional exercises	132
5.	Category \mathcal{O}	135
5.1	Definition and basic properties	135
5.2	Projective modules	139
5.3	Blocks via quiver and relation	144
5.4	Structure of a highest weight category	149
5.5	Grading	153
5.6	Homological properties	160
5.7	Category of bounded linear complexes of projective graded \mathcal{D} -modules	164
5.8	Projective functors on \mathcal{O}_0	170
5.9	Addenda and comments	178
5.10	Additional exercises	189
6.	Description of all simple modules	195
6.1	Weight and nonweight modules	195
6.2	Embedding into a Euclidean algebra	197
6.3	Description of simple nonweight modules	201

6.4	Finite-dimensionality of kernels and cokernels	204
6.5	Finite-dimensionality of extensions	210
6.6	Addenda and comments	213
6.7	Additional exercises	215
7.	Categorification of simple finite-dimensional modules	219
7.1	Decategorification and categorification	219
7.2	Naïve categorification of $\mathbf{V}^{(n)}$	221
7.3	Weak categorification of $\mathbf{V}^{(n)}$	226
7.4	Categorification of $\mathbf{V}^{(n)}$ via coinvariant algebras	232
7.5	Addenda and comments	234
7.6	Additional exercises	237
Appendix A	Answers and hints to exercises	241
	<i>Bibliography</i>	249
	<i>Index of Notation</i>	255
	<i>Index</i>	259
