

Contents

<i>Preface</i>	vii
1. Introduction	1
1.1 Common Features of Low-Dimensional Nanomaterials . . .	2
1.2 Intriguing Phenomena in Quantum Dots and Potential Applications	4
1.3 Advantages and Challenges of Technological Applications of Carbon Nanotubes	8
1.4 Excitonic Character and Numerical Approaches to QDs and SWCNTs	11
2. Electronic Structure and Phonon-Induced Carrier Relaxation in CdSe and PbSe Quantum Dots	17
2.1 Carrier Dynamics in quantum Dots: Review of Exciting Theoretical and Experimental Approaches	18
2.1.1 Theoretical Considerations of Electronic and Optical Properties of Quantum Dots	18
2.1.2 Dependence of Electronic Structure on a Host Material: CdSe and PbSe Quantum Dots	23
2.1.3 Experimental Rates of Carrier Relaxation in Quantum Dots: Phonon Bottleneck Problem	27
2.2 Simulations of Nonadiabatic Dynamics: Trajectory Surface Hopping (TSH) in Density Functional Theory (DFT)	30
2.2.1 Time-Dependent Kohn-Sham Theory (TDKS) . . .	31

2.2.2	Fewest Switches Surface Hopping in the Kohn-Sham Representation	33
2.2.3	Simulation Details	35
2.3	Results and Discussion	38
2.3.1	Electronic Structure at Zero Kelvin: Effects of Surface Reconstructions and Passivation	38
2.3.2	Evolution of Electronic Structure upon Temperature	45
2.3.3	Optical Spectra of CdSe and PbSe Quantum Dots	48
2.3.4	Active Phonon Modes	52
2.3.5	Phonon-Induced Electron and Hole Relaxation	55
2.3.6	Simulated Rates and Regimes of Carrier Relaxation	59
2.4	Conclusions	62
3.	Phonon-Induced Free Carrier Dynamics in Carbon Nanotubes	65
3.0.1	Dynamics in Nanotubes: Optical Experiments	66
3.0.2	Electronic Structure	70
3.1	Theoretical Considerations	72
3.1.1	Semiclassical Model of Dephasing	72
3.1.2	Decoherence Effects	73
3.1.3	Simulation Details	74
3.2	Results and Discussion	76
3.2.1	Phonon-Induced Intraband Relaxation	76
3.2.2	Estimates of Dephasing Timescales in SWCNTs	79
3.2.3	Nonradiative Recombination in a Semiconducting SWCNT	85
3.3	Conclusions	90
4.	Including Electron-Hole Correlations: Excitonic and Vibrational Properties of Carbon Nanotubes	93
4.1	Introduction	94
4.1.1	Experimental Evidence of Excitons and Strong Exciton-Phonon Copuling in SWCNTs	94
4.1.2	Available Theoretical Approaches Calculating Excitonic and Vibrational Effects	97
4.2	Computational ESMD Methodology	99
4.2.1	Hamiltonian Model and Electronic Correlations	100

4.2.2	Exciton-Vibrational Dynamics and Relaxation . . .	102
4.2.3	Real-Space Analysis	104
4.2.4	Simulation Details	105
4.3	Results and Discussion	110
4.3.1	Heat of Formation and Energy Gaps	110
4.3.2	Cross- and Parallel-Polarized Excitons from the Lowest Band	115
4.3.3	Bright Excitons at Ground and Excited Geometries	125
4.3.4	Photoexcited Vibronic Dynamics: Peierls Distortions	131
4.3.5	Electron-Phonon Coupling: Huang-Rhys Factor, Stokes Shift, and Vibrational Relaxation Energies	134
4.4	Conclusions	139
6.	Carbon Nanotube Technological Implementations	141
	<i>Color Index</i>	147
	<i>Bibliography</i>	161
	<i>Index</i>	185
