

World Scientific Series in 20th Century Physics – Vol. 35

## **A CAREER IN THEORETICAL PHYSICS**

Second Edition

by **Philip W Anderson** (*Princeton University, USA*)

**Contents:** Pressure Broadening in the Microwave and Infrared Regions; Absence of Diffusion in Certain Random Lattices; Theory of Dirty Superconductors; Localized Magnetic States in Metals; Infrared Catastrophe in Fermi Gases with Local Scattering Potentials; The Fermi Glass: Theory and Experiment; Possible Consequences of Negative U Centers in Amorphous Materials; Localization Redux; Suggested Model for Prebiotic Evolution: The Use of Chaos; Physics: The Opening to Complexity; and other papers.

## **BEAUTIFUL MODELS**

70 Years of Exactly Solved Quantum Many-Body Problems

by **Bill Sutherland** (*University of Utah, USA*)

**Contents:** Integrability and Nondiffraction; Techniques; The Classical Limit; Groundstate Wavefunctions of Product Form; The Heisenberg–Ising Model; Consistency; Exchange Models; The Sinh–Cosh Model; Exchange Lattice Systems by Freezing; The Hubbard Model.

## **METHUSELAH FLIES**

A Case Study in the Evolution of Aging

edited by **Michael R Rose** (*University of California, Irvine, USA*), **Hardip B Passananti** (*Orrick, Herrington & Sutcliffe LLP, Irvine, USA*) & **Margarida Matos** (*University of Lisbon, Portugal*)

**Contents:** Creation and Long-term Evolution of Methuselah Flies; Stress, Resistance, Physiology, and Aging; Reproduction, Nutrition, and Aging; Genetics and Molecular Biology of Methuselah Flies; Reverse Evolution of Methuselah Flies; Aging, Development, and Crowding.

World Scientific Series in 20th Century Physics – Vol. 35

## **A CAREER IN THEORETICAL PHYSICS**

Second Edition

by **Philip W Anderson** (*Princeton University, USA*)

This unique volume presents the scientific achievements of Nobel laureate P W Anderson, spanning the many years of his career. In this new edition, the author has omitted some review papers as well as **added over 15 of his research papers**. As in the first edition, he provides an introduction to each paper by explaining the genesis of the papers or adding some personal history.

The book provides a **comprehensive overview of the author's work which include significant discoveries and pioneering contributions**, such as his work on the Anderson model of magnetic impurities and the concept of localization; the study of spin glasses, the fluctuating valence problem and superexchange; his prediction of the existence of superfluidity in  $\text{He}^3$ ; his involvement in the discovery of the Josephson effect; his discovery of the "Higgs" mechanism in elementary particle physics; and so on.

*The new papers added to this edition include "Pressure Broadening in the Microwave and Infrared Regions", a condensation of most of the author's thesis; "Ordering and Antiferromagnetism", the best-known of his papers involving what are known as "frustrated" lattices; and "Localized Magnetic States in Metals", a paper mentioned in his Nobel Prize citation along with localization and superexchange; to name but a few.*

*A Career in Theoretical Physics* is an essential source of reference for physicists, chemists, materials scientists and historians of science. It is also suitable reading for graduate students.

## **BEAUTIFUL MODELS**

70 Years of Exactly Solved Quantum Many-Body Problems

by **Bill Sutherland** (*University of Utah, USA*)

This invaluable book provides a broad introduction to the fascinating and beautiful subject of many-body quantum systems that can be solved exactly. The subject began with Bethe's famous solution of the one-dimensional Heisenberg magnet more than 70 years ago, soon after the invention of quantum mechanics. Since then, the diversity and scope of such systems have been steadily growing.

*Beautiful Models* is self-contained and unified in presentation. It may be used as an advanced textbook by graduate students and even ambitious undergraduates in physics. It is also suitable for the non-experts in physics who wish to have an overview of some of the classic and fundamental models in the subject. The explanations in the book are detailed enough to capture the interest of the curious reader, and complete enough to provide the necessary background material needed to go further into the subject and explore the research literature.

## **METHUSELAH FLIES**

### **A Case Study in the Evolution of Aging**

edited by **Michael R Rose** (*University of California, Irvine, USA*), **Hardip B Passananti** (*Orrick, Herrington & Sutcliffe LLP, Irvine, USA*) & **Margarida Matos** (*University of Lisbon, Portugal*)

*Methuselah Flies* presents a trailblazing project on the biology of aging. It describes research on the first organisms to have their lifespan increased, and their aging slowed, by hereditary manipulation. These organisms are fruit flies from the species *Drosophila melanogaster*, the great workhorse of genetics. Michael Rose and his colleagues have been able to double the lifespan of these insects, and improved their health in numerous respects as well. The study of these flies with postponed aging is one of the best means we have of understanding, and ultimately achieving, the postponement of aging in humans. As such, the carefully presented detail of this book will be of value to research devoted to the understanding and control of aging.

World Scientific Series in 20th Century Physics – Vol. 35

## **A CAREER IN THEORETICAL PHYSICS**

Second Edition

by **Philip W Anderson** (*Princeton University, USA*)

**Readership:** Physicists, chemists and materials scientists.

## **BEAUTIFUL MODELS**

70 Years of Exactly Solved Quantum Many-Body Problems

by **Bill Sutherland** (*University of Utah, USA*)

**Readership:** Advanced undergraduates and graduate students in physics; non-experts interested in exactly solved quantum many-body systems.

## **METHUSELAH FLIES**

A Case Study in the Evolution of Aging

edited by **Michael R Rose** (*University of California, Irvine, USA*), **Hardip B Passananti** (*Orrick, Herrington & Sutcliffe LLP, Irvine, USA*) & **Margarida Matos** (*University of Lisbon, Portugal*)

**Readership:** Biologists and doctors interested in the study of aging.

## List of Subject Classifications

### **Agricultural Sciences**

- Animal Science
