

Göran Lindblom got his PhD from Lund Institute of Technology and became professor (chair) of Physical Chemistry at Umeå University 1981. He is Fellow of several scientific societies among which The Royal Swedish Academy of Sciences. He is also an F. C. Donder professor at University of Utrecht, The Netherlands. His main research interests are physical chemistry of lipids and their function in cell membranes, the importance of the regulation of lipid composition in membranes, and studies of lipid lateral diffusion, lateral phase separation (domain formation), and liquid crystalline phase structures that lipids form.
