

Morten Kjeldgaard is an associate professor at the Department of Molecular Biology, Aarhus University. From a background in chemistry and physics, he developed a profound interest for macromolecular crystallography and structural biology, with a special interest in protein synthesis. He spent two years as a post-doc at Yale University, involved in small-angle scattering studies on the 30S subunit. His scientific interests include crystallography, protein factors involved in protein synthesis, molecular graphics, and nucleic acid structure. He obtained his lic. scient. degree in 1990.
