

CONTENTS

Preface v

PART I: BURSTING AT THE SINGLE CELL LEVEL

1 THE DEVELOPMENT OF THE HINDMARSH-ROSE MODEL FOR BURSTING 3

Jim Hindmarsh and Philip Cornelius

1.1 Introduction	3
1.2 Tail Current Reversal	4
1.3 The 1982 Model	5
1.4 The 1984 Model	8
1.5 Subthreshold Oscillations	10
1.6 A Bifurcation Theorem	15

2 NEGATIVE CALCIUM FEEDBACK: THE ROAD FROM CHAY-KEIZER 19

Richard Bertram and Arthur Sherman

2.1 Introduction	19
2.2 Before the Beginning	20
2.3 The Beginning	24
2.4 The Demise of K(Ca)	32
2.5 The Return of K(Ca): Help from the Endoplasmic Reticulum	34
2.6 Further Modifications to the Model	41
2.7 Discussion	43

3 AUTOREGULATION OF BURSTING OF AVP NEURONS OF THE RAT HYPOTHALAMUS **49**

Peter Roper, Colin H. Brown, Charles W. Bourque and William E. Armstrong

3.1	Introduction	49
3.2	Electrical Properties of AVP Cells	52
3.3	Mathematical Model	55
3.4	Firing Patterns	58
3.5	Burst Structure	58
3.6	The Role of Calcium	62
3.7	The Action of Dynorphin	62
3.8	The Bursting Mechanism	66
3.9	The Dynamics of Dynorphin	71
3.10	Analysis of Bursting	73
	3.10.1 FAST	73
	3.10.2 SLOW	73
3.11	Discussion	81
	3.11.1 A dual role for calcium	81
	3.11.2 Alternative mechanisms for the plateau potential	81
	3.11.3 Excitable bursting	82

4 BIFURCATIONS IN THE FAST DYNAMICS OF NEURONS: IMPLICATIONS FOR BURSTING **89**

John Guckenheimer, Joseph H. Tien and Allan R. Willms

4.1	Introduction	90
4.2	A Two Dimensional Model of Spiking Sodium Currents	91
4.3	Fast-Slow Analysis of Bursting	104
	4.3.1 Aplysia	106
	4.3.2 Thalamic relay neurons	108
	4.3.3 Leech heart interneurons	110
	4.3.4 Plateau oscillations in leech heart interneurons	112
	4.3.5 Neurons of the pre-Bötzinger complex	113
4.4	Discussion	115

5 BURSTING IN 2-COMPARTMENT NEURONS: A CASE STUDY OF THE PINSKY-RINZEL MODEL	123
<i>Amitabha Bose and Victoria Booth</i>	
5.1 Introduction	123
5.2 The Pinsky-Rinzel Model	125
5.2.1 Equations and qualitative description of the complex burst	125
5.3 Dynamics of the Pinsky-Rinzel Model	129
5.3.1 Burst initiation	129
5.3.2 Somatic-dendritic ping-pong	133
5.4 Morris-Lecar Two-Compartment Models	137
5.5 Discussion	140
6 GHOSTBURSTING: THE ROLE OF ACTIVE DENDRITES IN ELECTROSENSORY PROCESSING	145
<i>Carlo R. Laing and Brent Doiron</i>	
6.1 Introduction	145
6.2 Bursting Mechanism	146
6.3 Ghostburster Dynamics	151
6.4 Unique Features	154
6.5 Extensions and Other Work	157
6.5.1 Reduced models	158
6.5.2 Periodic forcing	159
6.5.3 Burst excitability	160
6.5.4 Differential modulation of burst discharge	161
6.6 Parallel Processing with Bursts and Isolated Spikes	163
6.6.1 Ghostbusting the ghostburster	163
6.6.2 Spike train processing	166
6.7 Summary	169

PART II: BURSTING AT THE NETWORK LEVEL

7 ANALYSIS OF CIRCUITS CONTAINING BURSTING NEURONS USING PHASE RESETTING CURVES	175
<i>Carmen Canavier</i>	
7.1 Introduction	175
7.2 Stability Analysis for Two Coupled Oscillators	178
7.3 Analysis of a Circuit of Two Model Neurons	181
7.4 Stability Analysis for a Three Neuron Ring Circuit	183
7.5 Analysis of a Circuit of Three Model Neurons	186
7.6 Analysis of a Two Neuron Hybrid Circuit	189
7.7 Effect of Changing Burst Durations in the Two Neuron Circuit	191
7.8 Phenomenology of Resetting in a Biological Bursting Neuron	193
7.9 Significance	195
8 BURSTING IN COUPLED CELL SYSTEMS	201
<i>Martin Golubitsky, Krešimir Josić and LieJune Shiau</i>	
8.1 Introduction	201
8.2 Unfolding Theory and Bursting in Fast-Slow Systems	203
8.3 Bursting in Two Coupled Cells	205
8.4 \mathbf{Z}_2 -Equivariant Bifurcations	207
8.5 Pitchfork Bifurcation	209
8.6 Hopf/Hopf Mode Interactions	211
8.7 Takens-Bogdanov Bifurcation with \mathbf{Z}_2 Symmetry	213
8.8 Conclusion	219
9 MODULATORY EFFECTS OF COUPLING ON BURSTING MAPS	223
<i>Gerda de Vries</i>	
9.1 Introduction	223
9.2 Examples of Bursting Maps	225

9.2.1	One-dimensional maps	225
9.2.2	Two-dimensional maps	226
9.3	Effects of Coupling	230
9.3.1	Effects of coupling on one-dimensional maps	230
9.3.2	Effects of coupling on two-dimensional maps	232
9.4	Rulkov’s First Bursting Map: Explaining the Effect of Coupling	234
9.5	Discussion	238

10 BEYOND SYNCHRONIZATION: MODULATORY AND EMERGENT EFFECTS OF COUPLING IN SQUARE-WAVE BURSTING **243**

Gerda de Vries and Arthur Sherman

10.1	Introduction	243
10.2	The Model	245
10.3	Effect of Coupling: Identical Cells	247
10.3.1	Effects of coupling on spike patterns	249
10.3.2	Effects of coupling on burst period	251
10.4	Normal Form Reduction	254
10.4.1	Identical cells: $\Delta = 1$	255
	10.4.1.1 Stability of the in-phase and anti-phase steady states	256
10.4.2	Non-identical cells: $\Delta \neq 1$	257
10.5	Enhancement of the Period Extension with Heterogeneity .	258
10.6	Emergent Bursting	261
10.7	Synaptic Coupling	265
10.8	Discussion	267
10.8.1	Limitations and extensions	267
10.8.2	Comparison to other emergent oscillations	269

11 BURSTING IN EXCITATORY NEURAL NETWORKS **273**

Joël Tabak and John Rinzel

11.1	Introduction	274
11.2	Spontaneous Activity in the Developing Spinal Cord	274

11.3 Model of the Spontaneous Activity in the Embryonic Chick Spinal Cord	277
11.4 Properties and Applications of the Model	280
11.4.1 Bistability of the excitatory network with fixed synaptic efficacy	280
11.4.2 Episodic and rhythmic behavior due to activity-dependent depression of network excitability	283
11.4.3 Relationship between episode duration and inter-episode interval	287
11.4.4 Recovery of the activity after blockade of excitatory connections	289
11.5 Analogy between Network and Cellular Bursting	292
11.6 Discussion	294
11.6.1 Bursting activity in neural networks	295
11.6.2 Network vs cellular bursting	296
12 OSCILLATORY BURSTING MECHANISMS IN RESPIRATORY PACEMAKER NEURONS AND NETWORKS	303
<i>Robert Butera, Jonathan Rubin, David Terman and Jeffrey Smith</i>	
12.1 Introduction	304
12.2 Single Cell Dynamics: Evidence, Motivation, and Models	306
12.3 Coupling Effects in Two Cells: A Pathway to Larger Populations	312
12.4 The Big Bang: Populations of Excitatory Pacemakers	314
12.4.1 Synchronized bursting in a heterogeneous population	314
12.4.2 Dynamic range of network oscillations	316
12.4.3 Emergent rhythms: Pacemakers vs. group pacemakers	317
12.5 Dynamic Range of Bursting Activity	318
12.5.1 Fast/slow analysis of a single cell	318
12.5.2 The transition from bursting to spiking in coupled cells with $h_1 = h_2$	323

12.5.3	The transition from bursting to tonic spiking in the full model for two coupled cells	327
12.6	Effects of Heterogeneity	329
12.6.1	Motivation and introduction to modeling approach	329
12.6.2	The role of fast threshold modulation	330
12.6.3	Analysis of a synchronized bursting in a heterogeneous population	333
12.7	Contemporary Issues and Unresolved Problems	338
12.7.1	Single neuron properties and models	338
12.7.2	Analysis of coupled cells and networks	340

13 GEOMETRIC ANALYSIS OF BURSTING NETWORKS 347

Janet Best and David Terman

13.1	Introduction	348
13.2	Existence, Uniqueness and Stability of Square-Wave Bursters	349
13.2.1	Assumptions on the geometric model	350
13.2.2	The main result	352
13.2.3	Bursting solution	352
13.2.4	When do trajectories jump down?	353
13.2.5	Return map and outline of the proof	355
13.3	Propagating Activity Patterns	358
13.3.1	The model	358
13.3.2	Numerical results	361
13.3.3	Singular construction of smooth waves	362
13.3.4	Estimating the wave speed	364
13.4	Transitions between Irregular and Clustered Activity	367
13.4.1	The model	367
13.4.2	Two distinct activity patterns	369
13.4.3	Geometric analysis of irregular activity	370
13.4.4	Geometric analysis of clustered activity	375
13.4.5	Transitions and dependence on parameters	379

14 ELLIPTIC BURSTERS, DEPOLARIZATION BLOCK, AND WAVES	385
<i>Bard Ermentrout, Joyeeta Dutta-Moscato and David Pinto</i>	
14.1 Introduction	385
14.2 Methods	387
14.3 Results	388
14.3.1 The burster	388
14.3.2 Breaking up is easy to do	390
14.3.3 A normal form	392
14.3.4 Elliptic dentistry	393
14.4 Discussion	394
INDEX	397
