

Contents

1. Introduction	1
1.1 Telecommunications and Quality Control	1
1.2 The Digital Network	1
1.3 Quality Control	6
1.4 Exercises	14
1.5 A Probability Primer	17
1.6 A Random Sample	21
1.7 Joint Distributions	25
1.8 Exercises	28
2. Modelling a Stochastic Process	31
2.1 The Probability Space	31
2.2 Random Variables	38
2.3 Expectation	44
2.4 Conditional Probabilities	48
2.5 Independence	52
2.6 General Random Variables	55
2.7 Independence of General Random Variables	57
2.8 The Kolmogorov Extension Theorem	59
2.9 Exercises	64
3. Variables and Limit Theorems	71
3.1 Discrete Random Variables	71
3.2 Continuous Random Variables	76
3.3 Generating Functions	82

3.4	Law of Large Numbers	85
3.5	Exercises	92
4.	The Poisson Process	99
4.1	Introduction	99
4.2	Bernoulli Point Processes	100
4.3	The Poisson Process	104
4.4	Applications of the Poisson Process	107
4.5	A Further Characterization	110
4.6	The Poisson Approximation	113
4.7	Nonhomogeneous Poisson Processes	119
4.8	Exercises	123
5.	Markov Chains	127
5.1	Introduction	127
5.2	Steady-State Markov Chains	135
5.3	Convergence to Steady-State	140
5.4	Reversible Markov Chains	147
5.5	Hitting Probabilities	150
5.6	Proofs of Convergence to Steady State	161
5.7	Transience and Recurrence	165
5.8	Existence and the Strong Markov Property	169
5.9	The Watched Process	171
5.10	Foster's Criterion for Stability	175
5.11	Exercises	177
6.	Renewal Theory	183
6.1	Introduction	183
6.2	Renewal Reward Processes	187
6.3	Stationary Renewal Processes	192
6.4	Convergence to Stationarity	203
6.5	Renewal with Nonlattice Variables	209
6.6	Homogeneous Coupling	210
6.7	The Bernoulli Part and Coupling	214
6.8	Proof of the Coupling Theorem	217
6.9	Regenerative Processes	221
6.10	Exercises	225
7.	Markov Processes	229
7.1	Introduction	229
7.2	The Generator of a Markov Process	231
7.3	Queues and Time Reversal	242

7.4 Jackson Networks 250

7.5 Kelly or BCMP Networks 254

7.6 Approximation by a Markov Process 261

7.7 Exercises 265

8. Markov Decision Theory 271

8.1 Introduction 271

8.2 The Optimality Equation 276

8.3 Infinite Horizon Decision Problems 286

8.4 Continuous Time Decision Problems 295

8.5 Optimal Stopping 298

8.6 Quality Control - a Worst Case Analysis 308

8.7 Exercises 314

9. Appendix 319

9.1 Useful Results in Analysis 319

9.2 Integration and Expectation 319

9.3 Convexity 322

9.4 Norms and Fixed Points 324

9.5 Algebraic Results 327

9.6 Further Reading 328

9.7 Bibliography 330

9.8 Solutions to Selected Problems 334

9.8.1 Solutions to Selected Exercises in Chapter 1 334

9.8.2 Solutions to Selected Exercises in Chapter 2 336

9.8.3 Solutions to Selected Exercises in Chapter 3 338

9.8.4 Solutions to Selected Exercises in Chapter 4 342

9.8.5 Solutions to Selected Exercises in Chapter 5 346

9.8.6 Solutions to Selected Exercises in Chapter 6 349

9.8.7 Solutions to Selected Exercises in Chapter 7 352

9.8.8 Solutions to Selected Exercises in Chapter 8 354

Index 359
