Foreword	ix
<i>M. F. Beatty and M. A. Hayes</i>	
J. L. Ericksen's Autobiography	xiii
Publications of J. L. Ericksen	xxvii
<b>1. Crystal Symmetry</b>	<b>1</b>
1.1. On the Symmetry of Crystals	3
1.2. Nonlinear Elasticity of Diatomic Crystals	7
1.3. On the Symmetry of Deformable Crystals	14
1.4. Changes in Symmetry in Elastic Crystals	27
1.5. Crystal Lattices and Sub-Lattices	38
1.6. On Nonessential Descriptions of Crystal Multilattices	47
1.7. On Groups Occurring in the Theory of Crystal Multi-Lattices	77
<b>2. Constitutive Theory</b>	<b>111</b>
2.1. Multi-Valued Strain Energy Functions for Crystals	113
2.2. The Cauchy and Born Hypotheses for Crystals	117
2.3. Constitutive Theory for Some Constrained Elastic Crystals	134
2.4. Some Constrained Elastic Crystals	148
2.5. Equilibrium Theory for X-ray Observations of Crystals	165
2.6. A Minimization Problem in the X-ray Theory	185
2.7. Notes on the X-ray Theory	191
2.8. On Pitteri Neighborhoods Centered at Hexagonal Close-Packed Configurations	209
<b>3. Defects</b>	<b>239</b>
3.1. Volterra Dislocations in Nonlinearly Elastic Bodies	241
3.2. Twinning of Crystals	249
3.3. Thermoelastic Considerations for Continuously Dislocated Crystals	266
3.4. Some Surface Defects in Unstressed Thermoelastic Solids	272
3.5. Stable Equilibrium Configurations of Elastic Crystals	281
3.6. On Nonlinear Elasticity Theory for Crystal Defects	295
3.7. On Correlating Two Theories of Twinning	311
3.8. Twinning Analyses in the X-ray Theory	340
3.9. Twinning Theory for Some Pitteri Neighborhoods	369
3.10. On the X-ray Theory of Twinning	383

3.11. On the Theory of Rotation Twins in Crystal Multilattices	405
3.12. On the Theory of Growth Twins in Quartz	422
3.13. On the Theory of Cyclic Growth Twins	450
3.14. Unusual Solutions of Twinning Equations in the X-ray Theory	451
<b>4. Phase Transitions</b>	<b>453</b>
4.1. Some Phase Transitions in Crystals	455
4.2. Continuous Martensitic Transitions in Thermoelastic Solids	481
4.3. Weak Martensitic Transformations in Bravais Lattices	494
4.4. Bifurcation and Martensitic Transformations in Bravais Lattices	508
4.5. Local Bifurcation Theory for Thermoelastic Bravais Lattices	532
4.6. Thermal Expansion Involving Phase Transitions in Certain Thermoelastic Crystals	560
4.7. On the Possibility of Having Different Bravais Lattices Connected Thermodynamically	576
4.8. On the Theory of $\alpha$ - $\beta$ Phase Transition in Quartz	596
