

Contents

<i>Preface</i>	vii
1. Linear Spaces	1
1.1 Linear Operators	1
1.2 Continuous Linear Operators	2
1.3 Equations	4
1.4 Computing the Inverse of a Linear Operator	5
1.5 Fréchet Derivatives	6
1.6 Integration	10
1.7 Exercises	11
2. Divided Differences	17
2.1 Partially Ordered Topological Spaces	17
2.2 Divided Differences in a Linear Space	20
2.3 Divided Difference in a Banach Space	21
2.4 Divided Difference and Monotone Convergence	27
2.5 Divided Differences and Fréchet-derivatives	31
2.6 Enclosing the Root of a Nonlinear Equation	37
2.7 Exercises	44
3. Fundamental Fixed Point Theory	51
3.1 Fixed Points of Operators	51
3.2 Examples	53
3.3 Integral Equations Arising in Newton Transport	55
3.4 An Efficient Contractive Method	65

4.	Solving Equations	83
4.1	Linearization of Equations	83
4.2	The Convergence of Newton's Method	84
4.3	Local Convergence	89
4.4	Approximating Distinct Solutions	91
4.5	Approximation Using Finite Rank Operators	106
4.6	Projection Methods for Approximating Fixed Points	114
4.7	Solving Nonlinear Equations with a Nondifferentiable Term	121
4.8	Iteration Converging Faster than Newton's Method	127
4.9	Exercises	135
5.	Two-Step Newton Methods and Their Applications	157
5.1	Two-Step Newton Methods	157
5.2	Monotone Convergence	175
5.3	Exercises	179
6.	The Secant Method	193
6.1	The Modified Secant Method	193
6.2	Error Bounds for the Secant Method	203
6.3	Exercises	215
7.	Newton-Like Methods	225
7.1	Stirling's Method	225
7.2	Convergence for a Certain Class of Newton-Like Methods	242
7.3	Newton-Like Methods Under Mild Differentiability Conditions	261
7.4	Perturbed Newton-Like Methods	274
7.5	Projection Methods and Inexact Newton-like Iterations	285
7.6	Exercises	291
8.	Two-Point Newton-Like Methods	307
8.1	Two-Point Newton-Like Methods in Banach Space	307
8.2	A Fast Convergent Method	333
8.3	Exercises	349
9.	Variational Inequalities	363
9.1	Generalized Equations Using Newton's Method	363

9.2 Exercises	377
10. Special Topics	387
10.1 Methods Involving Outer or Generalized Inverses	387
10.2 Exercises	397
11. Operator Equations and Their Discretizations	405
11.1 The Mesh Independence Principle Under Hölder continuity	405
11.2 Exercises	420
12. Convergence on Generalized Spaces	431
12.1 Iterative Methods on Banach Spaces with a Convergence Structure	431
12.2 Exercises	440
13. Dynamic Processes	451
13.1 On Time Dependent Multistep Dynamic Processes	451
13.2 The Monotone Convergence of General Newton-Like Methods	460
13.3 Convergence Methods and Point to Point Mappings	473
13.4 Exercises	489
Appendix A Glossary of Symbols	493
<i>Bibliography</i>	495
<i>Index</i>	511
