Preface

vii

1. Random Variables	1
1.1 Basic Concepts	1
1.2 Expected Values	4
1.3 Probability Distribution Functions	4
1.3.1 Properties of probability density functions	10
1.4 The Expected Value Process	11
1.5 Variance and Standard Deviation	12
1.6 Moments and Moment Generating Functions	14
1.7 Common Types of Distributions	15
1.7.1 Uniform distribution	15
1.7.2 Binomial distribution	16
1.7.2.1 <i>Using the binomial distribution</i>	19
1.7.3 Poisson distribution	20
1.7.4 Gaussian (or normal) distribution	23
1.7.5 Student- <i>t</i> distribution	24
1.7.6 Sum of two Gaussian variables	26
1.7.7 The Chi-squared distribution	26
1.7.8 The error function	27
1.8 Functions of More Than One Random Variable	28
1.8.1 (Bayes theorem)	28
1.8.2 Joint Gaussian distributions	31
1.9 Change of Variable	32

2.	Measurement of Samples of Random Numbers	37
2.1	Variance of the Measured Mean	37
2.2	Estimate of the Variance	39
2.3	Variance of the Measured Variance	41
2.4	Non-Independent Random Variables	45
2.5	Histograms	47
2.5.1	Statistical experiments involving the uniform and binomial distributions	48
2.6	Confidence Limits	51
2.6.1	Tests of hypotheses	53
3.	Time Series-Random Variables that are Functions of Time	61
3.1	Averages	61
3.2	The Autocovariance and Autocorrelation Function	62
3.2.1	Variance of the average of a signal with correlation.	63
3.3	The Power Spectrum of a Random Signal	66
3.3.1	Short review of Fourier transforms	67
3.4	Processing Time Series by Computer	69
3.5	Estimation of the Autocorrelation	70
3.5.1	Error covariance for autocorrelation estimates	70
3.5.2	Random, correlated signal generator	75
3.6	Estimation of the Power Spectrum of Time Series Data	76
3.6.1	Generic properties of the digital Fourier transform	77
3.6.2	The variance of spectrum estimates	79
3.7	Batch Mode Autocorrelation	82
4.	Parameter Estimation	87
4.1	Motivation	87
4.2	Maximum Likelihood Estimation	91
4.2.1	Gaussian processes	92
4.2.2	Poisson processes	94
4.2.3	Non-independent Gaussian statistics	95
4.2.4	Chi-squared distributions	97
4.3	Residuals	98
4.4	Parameter Error Estimates	100
4.4.1	Expected errors for Gaussian statistics	103
4.4.2	Error estimates for joint Gaussian statistics	105
4.4.3	Error estimates for Poisson processes	106

4.4.4	Error estimates for Chi-square distributions	106
4.5	<i>A Priori</i> Error Estimation	106
4.6	Maximum <i>A Posteriori</i> Estimation	108
5.	Random Sampling	115
5.1	Basic Concepts of Random Sampling	115
5.2	Independent Sampling	116
5.2.1	Mean and variance of the mean with random sampling	117
5.2.2	Spectrum and autocorrelation estimate using randomly sampled data	119
5.2.3	Effect of finite sample intervals Δt	124
5.3	Sample and Hold Autocorrelation and Spectrum Estimation	124
5.4	Non-Independent Sampling	127
5.4.1	Sample and hold (rate depends on f)	129
5.4.2	Controlled sampling	132
5.4.3	Autocorrelation estimation	133
5.5	Photon Detection	134
5.5.1	Moments	134
5.5.2	Autocorrelation estimation	135
	<i>Index</i>	139
