<i>Foreword</i>	vii
<i>Preface</i>	ix
<i>Acknowledgments</i>	xi

I. Basic Methods

1. Seven Is More Than Six. The Pigeon-Hole Principle	1
1.1 The Basic Pigeon-Hole Principle	1
1.2 The Generalized Pigeon-Hole Principle	3
Exercises	9
Supplementary Exercises	11
Solutions to Exercises	12
2. One Step at a Time. The Method of Mathematical Induction	19
2.1 Weak Induction	19
2.2 Strong Induction	24
Exercises	26
Supplementary Exercises	28
Solutions to Exercises	29

II. Enumerative Combinatorics

3. There Are A Lot Of Them. Elementary Counting Problems	37
3.1 Permutations	37

3.2	Strings over a Finite Alphabet	40
3.3	Choice Problems	43
	Exercises	47
	Supplementary Exercises	51
	Solutions to Exercises	53
4.	No Matter How You Slice It. The Binomial Theorem and Related Identities	65
4.1	The Binomial Theorem	65
4.2	The Multinomial Theorem	70
4.3	When the Exponent Is Not a Positive Integer	72
	Exercises	74
	Supplementary Exercises	77
	Solutions to Exercises	80
5.	Divide and Conquer. Partitions	89
5.1	Compositions	89
5.2	Set Partitions	91
5.3	Integer Partitions	94
	Exercises	101
	Supplementary Exercises	102
	Solutions to Exercises	103
6.	Not So Vicious Cycles. Cycles in Permutations	109
6.1	Cycles in Permutations	110
6.2	Permutations with Restricted Cycle Structure	115
	Exercises	120
	Supplementary Exercises	122
	Solutions to Exercises	124
7.	You Shall Not Overcount. The Sieve	131
7.1	Enumerating The Elements of Intersecting Sets	131
7.2	Applications of the Sieve Formula	134
	Exercises	138
	Supplementary Exercises	139
	Solutions to Exercises	139

8. A Function Is Worth Many Numbers. Generating Functions	145
8.1 Ordinary Generating Functions	145
8.1.1 Recurrence Relations and Generating Functions .	145
8.1.2 Products of Generating Functions	152
8.1.3 Compositions of Generating Functions	157
8.2 Exponential Generating Functions	160
8.2.1 Recurrence Relations and Exponential Generating Functions	160
8.2.2 Products of Exponential Generating Functions . .	162
8.2.3 Compositions of Exponential Generating Functions	164
Exercises	167
Supplementary Exercises	169
Solutions to Exercises	172

III. Graph Theory

9. Dots and Lines. The Origins of Graph Theory	183
9.1 The Notion of Graphs. Eulerian Walks	183
9.2 Hamiltonian Cycles	188
9.3 Directed Graphs	190
9.4 The Notion of Isomorphisms	193
Exercises	196
Supplementary Exercises	199
Solutions to Exercises	201
10. Staying Connected. Trees	209
10.1 Minimally Connected Graphs	209
10.2 Minimum-weight Spanning Trees. Kruskal's Greedy Algorithm	216
10.3 Graphs and Matrices	220
10.3.1 Adjacency Matrices of Graphs	220
10.4 The Number of Spanning Trees of a Graph	223
Exercises	228
Supplementary Exercises	230
Solutions to Exercises	232

11. Finding A Good Match. Coloring and Matching	241
11.1 Introduction	241
11.2 Bipartite Graphs	243
11.3 Matchings in Bipartite Graphs	248
11.4 More Than Two Colors	254
11.5 Matchings in Graphs That Are Not Bipartite	256
Exercises	259
Supplementary Exercises	261
Solutions to Exercises	262
12. Do Not Cross. Planar Graphs	269
12.1 Euler's Theorem for Planar Graphs	269
12.2 Polyhedra	272
12.3 Coloring Maps	279
Exercises	281
Supplementary Exercises	282
Solutions to Exercises	283
 IV. Horizons	
13. Does It Clique? Ramsey Theory	287
13.1 Ramsey Theory for Finite Graphs	287
13.2 Generalizations of the Ramsey Theorem	292
13.3 Ramsey Theory in Geometry	295
Exercises	298
Supplementary Exercises	299
Solutions to Exercises	301
14. So Hard To Avoid. Subsequence Conditions on Permutations	307
14.1 Pattern Avoidance	307
14.2 Stack Sortable Permutations	319
Exercises	330
Supplementary Exercises	331
Solutions to Exercises	333

15.	Who Knows What It Looks Like, But It Exists. The Probabilistic Method	345
15.1	The Notion of Probability	345
15.2	Non-constructive Proofs	348
15.3	Independent Events	351
15.3.1	The Notion of Independence and Bayes' Theorem	351
15.3.2	More Than Two Events	355
15.4	Expected Values	356
15.4.1	Linearity of Expectation	357
15.4.2	Existence Proofs Using Expectation	360
15.4.3	Conditional Expectation	361
	Exercises	363
	Supplementary Exercises	365
	Solutions to Exercises	368
16.	At Least Some Order. Partial Orders and Lattices	375
16.1	The Notion of Partially Ordered Sets	375
16.2	The Möbius Function of a Poset	380
16.3	Lattices	388
	Exercises	395
	Supplementary Exercises	397
	Solutions to Exercises	399
17.	The Sooner The Better. Combinatorial Algorithms	407
17.1	In Lieu of Definitions	407
17.1.1	The Halting Problem	408
17.2	Sorting Algorithms	409
17.2.1	BubbleSort	409
17.2.2	MergeSort	412
17.2.3	Comparing the Growth of Functions	416
17.3	Algorithms on Graphs	417
17.3.1	Minimum-cost Spanning Trees, Revisited	417
17.3.2	Finding the Shortest Path	421
	Exercises	426
	Supplementary Exercises	428
	Solutions to Exercises	428

18. Does Many Mean More Than One? Computational Complexity	433
18.1 Turing Machines	433
18.2 Complexity Classes	436
18.2.1 The Class P	436
18.2.2 The Class NP	438
18.2.3 NP -complete Problems	445
18.2.4 Other Complexity Classes	450
Exercises	453
Supplementary Exercises	454
Solutions to Exercises	455
<i>Bibliography</i>	461
<i>Index</i>	465
