

Contents

Preface

Series Talks

- P. Ackerer, A. Younes*: A Finite Volume Formulation of the
Mixed Finite Element Method for Triangular Elements 1
- Alexandre Ern*: Finite Element Modeling of Hydrosystems with
Fully Saturated, Variably Saturated, and Overland Flows 19
- Patrick Goblet*: Sharp Front Modeling 60
- Catherine Gourlay, Marie-Hélène, Tusseau-Vuillemin*:
Numerical Modeling of Biological Processes: Specificities,
Difficulties and Challenges 75
- Deguan Wang*: Ecological Simulation of Red Tides in Shallow
Sea Area 99
- Ling Li*: Subsurface Pathways of Contaminants to Coastal
Waters: Effects of Oceanic Oscillations 126

Invited Talks

- Tingfang Wang, Sixun Huang, Huadong Du, Gui Zhang*: Studies on
Retrieval of the Initial Values and Diffusion Coefficient of
Water Pollutant Advection and Diffusion Process 174
- Jing Chen, Zhifang Zhou*: Application of Tabu Search Method
to the Parameters of Groundwater Simulation Models 191
- Xiaomin Xu, Deguan Wang*: Several Problems in River
Networks Hydraulic Mathematics Model 201

<i>Jue Yang, Deguan Wang, Ying Zhang: Study on the Character of Equilibrium Point and Its Impact on the Changing Rate of Phytoplankton Concentration Using a Simple Nutrient-Phytoplankton Model</i>	211
<i>Jie Zhou, Deguan Wang, Haiping Jiang, Xijun Lai: A Numerical Simulation of Thermal Discharge into Tidal Estuary with FVM</i>	223
