Preface	xiii
1 Basic Mathematical Background	1
1.1 Introduction	1
1.2 Vector Space	1
1.3 Normed Space	2
1.4 Banach Space	6
1.4.1 Hilbert Space	7
1.4.2 Special Banach Spaces	9
1.5 Metric Space	16
1.6 Banach Fixed Point Theorems	22
1.7 Bibliographical Notes	28
2 Linear Systems	29
2.1 Introduction	29
2.2 Some Examples	30
2.3 Representation of Solutions for TIS	36
2.4 Representation of Solutions for TVS	43
2.5 Continuous Dependence of Solution on Data	51
2.6 Input-Output Stability and System Equivalence	54
2.7 Impulsive (Measure Driven) Systems	63
2.7.1 Systems Subject to Impulsive Inputs	64
2.7.2 Systems Subject to Impulsive Structural Perturbation	67
2.7.3 Controlled Impulsive Systems	72
2.8 Exercises	73
2.9 Bibliographical Notes	74
3 Nonlinear Systems	77
3.1 Introduction	77

3.2	Some Examples	77
3.3	Existence and Uniqueness of Solutions	79
3.4	Properties of Solution Operator	87
3.5	Continuous Dependence of Solutions	89
3.6	Impulsive Systems	94
3.6.1	Classical Models	95
3.6.2	General Impulsive Models(Driven by Vector Measures)	102
3.7	Differential Inclusions	108
3.8	Exercises	115
3.9	Bibliographical Notes	116
4	Basic Stability Theory	119
4.1	Introduction	119
4.2	Stability of the Equilibrium	120
4.3	Lyapunov Stability Theory	124
4.4	Lyapunov First Method	133
4.5	Stability of Elementary Impulsive Systems	140
4.6	Exercises	148
4.7	Bibliographical Notes	150
5	Observability and Identification	151
5.1	Introduction	151
5.2	Linear Time Invariant Systems	151
5.3	Some Examples	159
5.4	Linear Time Varying Systems	162
5.5	Input Identification	167
5.6	Exercises	178
5.7	Bibliographical Notes	179
6	Controllability and Stabilizability	181
6.1	Introduction	181
6.2	Linear Time Invariant Systems	181
6.3	Linear Time Varying Systems	194
6.4	Perturbed (Linear/Nonlinear) Systems	200
6.5	Stabilizability and Dynamic Compensators	208
6.6	Controllability of Linear Impulsive Systems	215

6.7	Exercises	218
6.8	Bibliographical Notes	219
7	Basic Calculus of Variations	221
7.1	Introduction	221
7.2	Finite Dimensional Problems	221
7.3	Existence of Solutions for Variational Problems	224
7.4	Necessary Conditions	238
7.5	Basic Algorithm for Numerical Computation	246
7.6	Some Examples	248
7.7	Exercises	252
7.8	Bibliographical Notes	253
8	Optimal Control: Necessary Conditions and Existence	255
8.1	Introduction	255
8.2	General Problem	255
8.3	Necessary Conditions of Optimality	257
8.3.1	Ordinary Controls	257
8.3.2	Transversality Conditions:	267
8.3.3	Relaxed Controls	271
8.4	Some Special Cases involving constraints	280
8.5	Basic Algorithm for Numerical Computation	283
8.6	Existence of Optimal Controls	285
8.6.1	Ordinary Controls	285
8.6.2	Relaxed Controls	290
8.6.3	Uncertain Systems/Differential Inclusions	293
8.6.4	Impulsive Controls	297
8.7	Exercises	299
8.8	Bibliographical Notes	301
9	Linear Quadratic Regulator Theory	303
9.1	Introduction	303
9.2	Linear Quadratic Regulator	304
9.3	Perturbed Regulators	312
9.4	Constrained Regulators.	314
9.5	Algebraic Riccati Equation: Steady State	316
9.6	Some Nonstandard Regulator Problems	320
9.7	Disturbance Rejection Problem	328

9.8	Structurally Perturbed Impulsive Systems	330
9.9	Exercises	335
9.10	Bibliographical Notes	335
10	Time Optimal Control	337
10.1	Introduction	337
10.2	General Problem	337
10.3	Attainable and Reachable Sets	338
10.4	Linear Systems	338
10.4.1	Bang-Bang Control	343
10.5	Linear Impulsive Systems	348
10.6	Nonlinear Systems Including an Algorithm	350
10.7	Exercises	356
10.8	Bibliographical Notes	357
11	Stochastic Systems with Applications	359
11.1	Introduction	359
11.2	Stochastic Systems	359
11.2.1	SDE Based on Brownian Motion	360
11.2.2	SDE Based on Fractional Brownian Motion	369
11.3	Differential Equations Based on Poisson Process	373
11.3.1	Application to Auto-Insurance	377
11.3.2	Application to Portfolio Management	379
11.3.3	Population Dynamics	382
11.4	Applications to Computer Network	383
11.4.1	Dynamic Model for Access Control	384
11.4.2	TCP Flow Control and Active Queue Management	390
11.5	Real Time Control and Optimization	398
11.5.1	Deterministic System	398
11.5.2	Stochastic System	400
11.6	Exercises	402
11.7	Bibliographical Notes	403
A	Basic Results from Analysis	405
A.1	Introduction	405
A.2	Measures and Measurable Functions	405
A.3	Riemann and Riemann-Stieltjes Integral	407
A.4	Lebesgue Integral	408
A.5	Modes of Convergence	411

A.6 Frequently Used Results from Measure Theory 414
A.7 Frequently Used Results from Analysis 423
A.8 Bibliographical Notes 427

Bibliography **429**

Index **447**
