<i>Preface</i>	xii
<i>Abbreviations and Notations</i>	xiii
1. A Review of Probability Distributions and Their Properties	1
1.1 Introduction	1
1.2 The Exponential Density	1
1.3 The Gamma Density	2
1.4 The Beta Density	3
1.5 The Uniform Density	5
1.6 The Cauchy Density	5
1.7 The Normal Density in One Dimension	6
1.7.1 Convolution Property	6
1.8 The Normal Density in n Dimensions	7
1.9 Infinitely Divisible Distributions	9
1.10 Stable Distributions	11
1.11 Problems for Solution	12
2. Definition and Characteristics of a Stochastic Process	19
2.1 Introduction	19
2.2 Analytic Definition	19
2.3 Definition in Terms of Finite-Dimensional Distributions	20
2.4 Moments of Stochastic Processes	23
2.5 Some Problems in Stochastic Processes	24
2.6 Probability Models	25
2.7 Comments on the Definition of a Stochastic Process	26

3.	Some Important Classes of Stochastic Processes	29
3.1	Stationary Processes	29
3.2	Processes with Stationary Independent Increments	31
3.3	Markov Processes	33
3.4	Problems for Solution	37
4.	Stationary Processes	41
4.1	Examples of Real Stationary Processes	41
4.2	The General Case	44
4.3	A Second Order Calculus for Stationary Processes	46
4.4	Time Series Models	54
4.5	Mean Square Convergence	57
4.6	Problems for Solution	58
5.	The Brownian Motion and the Poisson Process: Lévy Processes	63
5.1	The Brownian Motion	63
5.1.1	Historical Remarks	63
5.1.2	Introduction	63
5.1.3	Properties of the Brownian Motion	65
5.2	The Poisson Process	71
5.2.1	Introduction	71
5.2.2	Properties of the Poisson Process	72
5.2.3	The Compound Poisson Process	78
5.3	Lévy Processes	80
5.4	The Gaussian Process	81
5.4.1	Application to Brownian Storage Models	89
5.5	The Inverse Gaussian Process	91
5.6	The Randomized Bernoulli Random Walk	91
5.6.1	Application to the Simple Queue	96
5.7	Lévy Processes: Further Properties	97
5.8	Problems for Solution	103
6.	Renewal Processes and Random Walks	107
6.1	Renewal Processes: Introduction	107
6.1.1	Physical Interpretation	108
6.2	The Renewal-Counting Processes $\{N(t)\}$	110
6.3	Renewal Theorems	122
6.4	The Age and the Remaining Lifetime	125

6.5	The Stationary Renewal Process	130
6.6	The Case of the Infinite Mean	131
6.7	The Random Walk on the Real Line: Introduction	134
6.8	The Maximum and Minimum Functionals	135
6.9	Ladder Processes	139
6.10	Limit Theorems for M_n	147
6.11	Problems for Solution	150
7.	Martingales in Discrete Time	155
7.1	Introduction and Examples	155
7.2	Some Terminology	158
7.3	Martingales Relative to a Sigma-Field	159
7.4	Decision Functions; Optional Stopping	161
7.5	Submartingales and Supermartingales	162
7.6	Optional Skipping and Sampling Theorems	168
7.7	Application to Random Walks	177
7.8	Convergence Properties	181
7.9	The Concept of Fairness	185
7.10	Problems for Solution	186
8.	Branching Processes	189
8.1	Introduction	189
8.2	The Problem of Extinction	194
8.3	The Extinction Time and the Total Progeny	197
8.4	The Supercritical Case	200
8.5	Estimation	203
8.6	Problems for Solution	207
9.	Regenerative Phenomena	213
9.1	Introduction	213
9.2	Discrete Time Regenerative Phenomena	216
9.3	Subordination of Renewal Counting Processes	221
9.4	The Simple Random Walk in D Dimensions	225
9.5	The Bernoulli Random Walk	227
9.6	Ladder Sets of Random Walks on the Real Line	232
9.7	Further Examples of Recurrent Phenomena	237
9.8	Regenerative Phenomena in Continuous Time	241
9.9	Stable Regenerative Phenomena	255
9.10	Problems for Solution	258

10.	Markov Chains	261
10.1	Introduction	261
10.2	Discrete Time Markov Chains	261
10.3	Examples of Finite Markov Chains	263
10.3.1	Markov Trials	263
10.3.2	The Bernoulli–Laplace Diffusion Model	267
10.4	The Limit Distribution of Finite Markov Chains	268
10.5	Classification of States. Limit Theorems	272
10.6	Closed Sets. Irreducible Chains	275
10.7	Stationary Distributions	279
10.8	Examples of Infinite Markov Chains	281
10.8.1	The Branching Process as a Markov Chain	281
10.8.2	The Queueing System GI/M/1	283
10.9	Continuous Time Markov Chains	286
10.10	Examples of Continuous Time Markov Chains	292
10.10.1	The Poisson Process as a Markov Chain	292
10.10.2	The Pure Birth Process	293
10.10.3	The Pure Death Process	296
10.10.4	The Birth and Death Process	297
10.11	Models for Population Growth	298
10.11.1	Some Deterministic Models	298
10.11.2	Stochastic Models	301
10.11.3	The Yule–Furry Model	302
10.11.4	The Feller–Arley Model	304
10.11.5	The Kendall Model	308
10.11.6	The Differential Equation	309
10.12	Problems for Solution	310
10.12.1	Finite Markov Chains	310
10.12.2	Infinite Markov Chains	314
10.12.3	Continuous Time Markov Chains	315
10.12.4	Models for Population Growth	317
	Appendix A: Tauberian Theorems	321
	Appendix B: Some Asymptotic Relations	337
