

Contents

1	Elementary Concepts	1
1.1	Introduction	1
1.2	Preliminary Conventions and Definitions	3
2	Kolmogorov Probability Theory	7
3	Infinitesimals	11
3.1	Introduction	11
3.2	Ultrafilters	15
3.3	Ultrapowers of the Reals	18
3.4	Totally Ordered Field Extensions of the Reals	25
4	Qualitative Probability	29
4.1	Extensive Measurement of Probability	29
4.2	Probability Representations	36
4.2.1	Scott's Theorem	39
4.3	$^*\mathbb{R}$ -probability Representations	43
4.4	Weak Probability Representations	50
4.5	Independence	53
4.5.1	Independent Experiments	54
5	Qualitative Utility	61
5.1	Brief Overview	61
5.2	Subjective Expected Utility	61
5.3	Dual Bilinear and Rank Dependent Utility	66
6	Axioms for Choice Proportions	75
6.1	Brief Overview	75
6.2	Luce's Choice Property	76
6.3	BTL Model of Choice	78

6.4	Basic Choice Axioms	78
7	Conditional Belief	85
7.1	Introduction	85
7.2	Belief Axioms	89
7.3	Choice Axioms	96
7.4	Belief Support Functions	97
7.4.1	Fair Bets	99
7.4.2	Ellsberg's Paradox	100
7.5	Application to Support Theory	103
7.5.1	Empirical Phenomena	103
7.5.2	Tversky's and Koehler's Theory	104
7.5.3	Rottenstreich's and Tversky's Theory	111
7.6	Conclusions	112
8	Lattices	115
8.1	Introduction	115
8.2	Boolean Lattices	116
8.3	Representation Theorems of Stone	118
8.4	\sqcap -Complemented Lattices	124
8.4.1	Lattices of Open Sets	125
8.4.2	Properties of lattices of open sets	128
8.5	Intuitionistic Propositional Logic	130
8.6	Non-Boolean Event Spaces	131
9	Belief for Scientific Events and Refutations	133
9.1	Introduction	133
9.2	Lattices of Scientific Events	134
9.3	Boolean Lattice of Refutations	137
9.4	Probability Theory for Scientific Events	140
9.5	An Example Involving American Law	145
10	The Psychology of Human Probability Judgments	149
10.1	Introduction	149
10.2	Support Theory	150
10.2.1	Judgmental Heuristics	150
10.2.2	Empirical Basis	151
10.2.3	Summary of the Theory	153
10.2.4	Focal Descriptions and Contexts in Support Theory	155
10.3	Concepts Used in the New Formulation	155

10.3.1 Focal Descriptions and Contexts in the New Formulation	155
10.3.2 Semantical Representations	156
10.3.3 Cognitive Representations	157
10.3.4 Cognitive Model	159
10.3.5 Clear Instances	160
10.3.6 Single Probability Judgments	162
10.3.7 Multiple Probability Judgments	164
10.4 Frequency Based Judgments	164
10.5 Judgments Based on Representativeness	168
10.6 Probability Judgments for Binary Partitions	172
10.7 Topological Considerations	176
11 Metamathematical Considerations	179
11.1 Brief Summary	179
11.2 First Order Languages	180
11.3 Models	182
11.4 Łoś's Theorem	186
11.5 Compactness Theorem of Logic	190
11.6 Löwenheim-Skolem Theorem	191
11.7 Axiomatizability and Uniqueness of Probability Representations	196
11.8 Axiom of Choice and Probability Theory	202
11.8.1 Classical Results of Vitali, Hausdorff, Banach, and Ulam	202
11.8.2 Implications for σ -additivity	205
