

Contents

Preface	vii
Notation and Acronyms	xi
Chapter 1 Multilayer Control	1
1.1 Control System	1
1.2 Hierarchical Control Structures	2
1.2.1 Functional multilayer structure	4
1.2.2 Temporal multilayer structure	9
1.3 Decomposition and Modeling in Functional Multilayer Structure	11
1.4 Optimizing Control	15
1.5 Multilayer Control of Integrated Wastewater System: A Case Study	17
1.5.1 Presentation of integrated wastewater system at Kartuzy in Poland	17
1.5.2 Control objectives	25
1.5.3 Control structure	26
1.5.3.1 Supervisory control layer	28
1.5.3.2 Optimizing control layer	29
1.5.3.3 Follow-up control layer	29
1.5.3.4 Temporal decomposition	29
Chapter 2 Optimizing Control Layer	37
2.1 Process Descriptions and Control Task Formulation	37
2.1.1 Process description	37
2.1.2 Optimizing control and optimal control problems	40

2.1.3	The steady-state case	43
2.1.4	Implementation of the set-point step changes	48
2.2	Steady-State Model Optimization	50
2.3	Steady-State Optimizing Control	57
2.3.1	Basic control structures and strategies	57
2.3.2	Problems with constraints on process outputs	66
Chapter 3 Iterative Correction with Disturbance Estimation		73
3.1	Correction Algorithm for Problems with Unconstrained Outputs	73
3.2	Correction Algorithm for Structures with Feedback Controlled Output Constraints	76
Chapter 4 Integrated System Optimization and Parameter Estimation (ISOPE)		81
4.1	Algorithm Structure	82
4.2	Convergence and Optimality	87
4.3	On-line Estimation of Process Mapping Derivatives	92
4.4	Dual ISOPE Algorithm	94
4.5	Dual ISOPE Algorithm with Optimized Initial Phase	101
4.6	Comparative Simulation Study	105
4.7	Case Study Examples	116
Chapter 5 ISOPE for Problems with Output Constraints		131
5.1	Feedback Controlled Output Constraints	132
5.1.1	Process with constraint controllers	132
5.1.2	Basic ISOPE algorithm	137
5.1.3	Dual ISOPE algorithm	145
5.1.4	Simulation studies	151
5.2	Algorithmic Implementation of Output Constraints	169
5.2.1	Problem formulation and analysis	169
5.2.2	Algorithm 1	170
5.2.3	Algorithm 2	172
5.2.4	Illustrative simulation example	176
5.3	ISOPE as Optimization Algorithm for Nonlinear Models	180
Chapter 6 Iterative Algorithms for Dynamic Optimizing Control		183
6.1	Optimizing Control of Batch Processes	183

6.1.1	Control task formulation	183
6.1.2	Optimizing control algorithm structure	187
6.1.3	Implementation of DISOPE algorithm	191
	6.1.3.1 Implicit implementation of DISOPE algorithm	192
	6.1.3.2 Explicit implementation of DISOPE algorithm	196
6.2	ISOPE for Traveling Load Furnace Control: A Case Study . .	198
6.2.1	Introduction	198
6.2.2	Description of the process, measurement instrumenta- tion and control architecture and hardware	200
6.2.3	Defining the batch for the pilot-scale traveling load furnace	202
6.2.4	Mathematical model of the batch and the parameter estimation problem	204
6.2.5	Performance function	214
6.2.6	Dynamic modified model-based optimization problem .	215
6.2.7	Reducing number of control signals	216
	6.2.7.1 Periodic control functions	217
	6.2.7.2 Parameterized control functions	219
Chapter 7 Optimizing Control of Interconnected Systems		227
7.1	The Interconnected System Description and Modeling	227
7.2	Iterative Correction by Interaction Balance Method with Feedback	234
	7.2.1 Presentation of the method	234
	7.2.2 Coordination strategies	241
	7.2.3 Simulation studies	244
7.3	ISOPE Double-Loop Iterative Algorithms with Input-Output Measurements	252
	7.3.1 ISOPE double-loop iterative algorithms	252
	7.3.2 Double-loop iterative algorithms with input-output measurements	254
	7.3.3 System-based double-loop algorithm	260
	7.3.4 Model-based double-loop algorithms	266
	7.3.4.1 Model-based double-loop algorithm with tight inner loop	267
	7.3.4.2 Model-based double-loop algorithm with relaxed inner loop	276
7.3.5	Simulation studies	283

7.4	ISOPE Double-Loop Iterative Algorithms with Output	
	Measurements	293
7.4.1	Structure	294
7.4.2	Optimality	298
7.4.3	System-based double-loop algorithm	304
	7.4.3.1 Algorithm	304
	7.4.3.2 Algorithmic mappings and convergence . . .	308
7.4.4	Model-based double-loop algorithms	312
	7.4.4.1 Model-based double-loop algorithm with tight inner loop	312
	7.4.4.2 Model-based double-loop algorithm with re- laxed inner loop	317
7.4.5	Simulation studies	326
Appendix A Proof of Theorem 4.1		337
Appendix B Proofs of Theorems 7.1, 7.2 and 7.3		341
B.1	Proof of Theorem 7.1	341
B.2	Proof of Theorem 7.2	345
B.3	Proof of Theorem 7.3	349
	Bibliography	355
	Index	363
