<i>Preface</i>	vii
1. Random Polymer Models and their Applications	1
1.1 Random Polymers and (De)Localization Phenomena	1
1.2 A First Model: Pinning on a Defect Line	6
1.2.1 Pinning a walk on a defect line	6
1.2.2 Pinning more general processes on a defect line	13
1.3 Entropic Repulsion and Wetting Phenomena	17
1.3.1 Walls versus penetrable substrates	20
1.4 The Denaturation Transition: Poland–Scheraga Models	21
1.5 Force Induced Unzipping	26
1.6 Inhomogeneous Charge Distributions: Copolymers and Pin- ning	29
1.6.1 Periodic pinning models	30
1.6.2 Copolymers, periodic copolymers and selective inter- faces	32
1.6.3 Copolymers with adsorption	36
1.7 Fully Inhomogeneous Charge Distributions and Disordered Polymer Models	37
1.7.1 Annealed models	41
1.8 On the Return Time Viewpoint	42
1.9 On Related Classes of Models	43
1.9.1 More general return times	43
1.9.2 Rewards and penalties on general structures	45
1.10 Bibliographic Complements	46

2.	The Homogeneous Pinning Model	49
2.1	The Free Energy	49
2.2	Renewal Theory and Sharp Estimates	52
2.3	Path Properties: The Infinite Volume Limit	56
2.4	Path Properties: The Scaling Limit	57
2.5	Bibliographic Complements	63
3.	Weakly Inhomogeneous Models	69
3.1	A Formula for the Free Energy: Reduction to a Finite Dimension Problem	69
3.2	Sharp Estimates on the Partition Function	75
3.3	The Limit Path Trajectories	77
3.3.1	The infinite volume limit	78
3.3.2	The scaling limit	80
3.4	First Order Transitions, Non-Uniqueness and Phase Diagrams	82
3.5	Bibliographic Complements	87
4.	The Free Energy of Disordered Polymer Chains	89
4.1	Preliminary Observations	89
4.2	Existence of the Free Energy and Self-Averaging	90
4.3	Periodic versus Disordered Charge Sequences	94
4.4	Alternative Approaches to the Existence of the Free Energy	96
4.4.1	Concentration inequalities and self-averaging	96
4.4.2	The Super-Additive Ergodic Theorem approach	97
4.5	Bibliographic Complements	98
5.	Disordered Pinning Models: The Phase Diagram	101
5.1	Preliminary Observations on the Free Energy	101
5.2	An Improved Lower Bound on the Free Energy	102
5.3	On the Upper Bound: Annealing and Constrained Annealing	109
5.4	The Effect of the Disorder on the Order of the Transition: A Smoothing Inequality	111
5.5	What is One Expecting: The Renormalization Group View- point and the Harris Criterion	116
5.6	A Fully Inhomogeneous Non-Disordered Model	118

5.7	Bibliographic Complements	122
6.	Disordered Copolymers and Selective Interfaces: The Phase Diagram	127
6.1	Copolymers and Homogeneous Localization	130
6.2	Rare Stretch Strategy for Localization Estimates	135
6.3	The Weak Coupling Limit: Brownian Motion Model and Universality	140
6.3.1	On more general copolymer models and the Brownian scaling	142
6.3.2	Copolymers with adsorption	144
6.4	Bibliographic Complements	146
7.	The Localized Phase of Disordered Polymers	151
7.1	A First Tightness Estimate	151
7.2	Quenched versus Quenched Averaged Estimates	154
7.3	Quenched Averaged Estimates and the Infinite Volume Poly- mer Measure	160
7.4	Bibliographic Complements	164
8.	The Delocalized Phase of Disordered Polymers	167
8.1	Large Deviations and Delocalization	168
8.2	Beyond Large Deviations: $O(\log N)$ Results	170
8.3	The Strongly Delocalized Regime	174
8.4	Bibliographic Complements	177
9.	Numerical Algorithms and Computations	181
9.1	Computing the Partition Function	182
9.1.1	Random walk models	182
9.1.2	General renewal models	183
9.1.3	The Fixman–Freire Algorithm	184
9.2	A Statistical Test for Localization	185
9.3	Applications: A Few Examples	188
9.4	Bibliographic Complements	191
	Appendix A Mathematical Tools	193
A.1	Limit Theorems in Probability	193
A.1.1	Some remarks on convexity	196

A.2 Entropy	196
A.3 Concentration Properties	198
A.4 Slow Variation and Laplace Transforms	200
A.5 Renewal Theory for N Valued Random Variables	202
A.5.1 The renewal theorem	204
A.5.2 The renewal mass function: Transient case	206
A.5.3 The renewal mass function: Null recurrent case	207
A.5.4 Scaling limits of renewal processes	208
A.6 Random Walks	212
A.7 The Super-Additive Ergodic Theorem	214
A.8 Perron–Frobenius Theory	216
Appendix B Some Technical Estimates	219
B.1 Homogeneous Localization Strategy: The Entropy Density	219
B.2 The Weak Localization Limit	221
B.3 Localization and Loss of Memory	222
Appendix C Effective Interface Models	229
C.1 Ising Model, Effective Interface Models and Random Walks	229
<i>Bibliography</i>	233
<i>Index</i>	241
