

Contents

Preface	vii
Chapter 1	
Fundamental Concepts	1
1.1 Need for Radiation Protection	2
1.2 Ionizing Radiation and Injury	3
1.3 The Structure of Matter	4
1.3.1 Atomic Electrons	5
1.3.2 The Nucleus	7
1.4 Radioactive or Nuclear Decay	8
1.4.1 Alpha Decay	8
1.4.2 Beta Decay	8
1.4.3 Gamma or Isomeric Decay	10
1.5 Direct and Indirect Ionization	11
1.5.1 General Interaction Mechanisms	11
1.5.2 Linear Energy Transfer	14
1.6 Interaction of Directly Ionizing Particles	14
1.6.1 Alpha Particles	14
1.6.2 Electrons	16
1.7 Interaction of Indirectly Ionizing Particles	17
1.7.1 Photons	18
1.7.2 Neutrons	21
1.8 Review Questions	24
1.9 Problems	25
Chapter 2	
Detectors	27
2.1 Gas-Filled Detectors	28
2.1.1 Ionization Chambers	29
2.1.1.1 Principles of Operation	30
2.1.1.2 Electron Movement to Collector	30
2.1.2 Geiger Counters	31
2.1.2.1 Principles of Operation	32
2.1.2.2 Count Method	33
2.1.2.3 Quenching	34
2.1.2.4 Resolving Time	35
2.1.3 Proportional Counters	35
2.1.3.1 Principles of Operation	36
2.1.3.2 Physical Characteristics	36
2.1.3.3 Filling Gas	37
2.1.3.4 Resolving Time	37
2.1.4 Windowless Gas Flow Counters	37

2.2	Solid State Detectors	40
2.2.1	Scintillation Detectors	40
2.2.1.1	Principles of Operation	41
2.2.1.2	Light Collection	45
2.2.1.3	Resolving Time	46
2.2.1.4	Remarks	46
2.2.2	Semiconductor Detectors	47
2.2.2.1	Principles of Operation	47
2.2.2.2	Types of Junction Semiconductors Detectors	49
2.2.2.3	Operating Characteristics of Junction Detectors	53
2.3	Review Questions	57
2.4	Problems	58
Chapter 3		
Units Associated with Radiation Protection		59
3.1	Exposure	59
3.2	Absorbed Dose	61
3.3	Kerma	62
3.4	Relative Biological Effectiveness and Radiation Protection	63
3.5	Equivalent Dose and Effective Dose	65
3.6	Other Dosimetric Quantities	67
3.7	Review Questions	69
3.8	Problems	70
Chapter 4		
Biological Effects and Effective/Equivalent Dose Limits		71
4.1	Regulatory Agencies	73
4.2	Occupational Exposure	74
4.3	Biological Factors	74
4.4	Manifestation of Overexposure in Adults	77
4.5	Recommendations for Effective/Equivalent Dose Limitations	78
4.6	Use of Effective/Equivalent Dose Limits	82
4.7	Review Questions	83
4.8	Problems	84
Chapter 5		
Common Survey and Calibration Instruments		85
5.1	Survey Monitors	85
5.1.1	Characteristics of an Effective Survey Instrument	86
5.1.2	Energy Characteristics	86
5.1.3	Ionization Chamber Survey Monitors	87
5.1.3.1	“Cutie Pie” Monitors	88
5.1.3.2	Digital Ionization Chamber Monitors	89
5.1.4	Geiger-Müller Monitors	89

5.1.5	Scintillation Monitors	92
5.1.6	Proportional Survey Monitors	92
5.1.6.1	Neutron Monitoring	93
5.1.6.2	Low-Energy Particle Monitoring	95
5.1.7	Survey Instruments for Container Monitoring and Emergency Situations	95
5.2	Calibration Instruments for Radiation Sources	97
5.2.1	Precision Electrometer/Dosimeter	97
5.2.2	Non-invasive Quality Assurance Test System	98
5.2.3	Patient Air Kerma Monitors	100
5.2.4	Calibration of Radioactive Sources	101
5.2.5	Calibration of Survey Monitors	102
5.3	Review Questions	104
5.4	Problems	105
Chapter 6		
Personnel Monitors		107
6.1	General Characteristics	107
6.2	Delayed Readout Personnel Monitors	108
6.2.1	Film Badges	109
6.2.1.1	Advantages and Disadvantages	110
6.2.2	Thermoluminescent Dosimeters (TLDs)	111
6.2.2.1	Advantages and Disadvantages	112
6.2.3	Optically Stimulated Luminescence (OSL)	112
6.2.3.1	Advantages and Disadvantages	112
6.3	Immediate Readout Personnel Monitors	113
6.3.1	Solid State Devices	113
6.3.1.1	Advantages and Disadvantages	113
6.3.2	Ion Chamber Devices	114
6.3.2.1	Direct-Reading Monitors	114
6.3.2.2	Condenser-Type Pocket Chambers	115
6.3.2.3	Advantages and Disadvantages	115
6.4	Personal Alarm Dosimeters	116
6.4.1	Solid State Type Detectors	116
6.4.1.1	Advantages and Disadvantages	117
6.4.2	G-M Type Detectors	117
6.4.2.1	Advantages and Disadvantages	117
6.5	Personal Air Samplers	118
6.5.1	Advantages and Disadvantages	118
6.6	Other Personnel Monitoring Methods	119
6.7	Review Questions	119
6.8	Problems	120

Chapter 7

Practical Means of Radiation Protection	121
7.1 Time	121
7.2 Distance	122
7.3 Shielding	126
7.3.1 Half-Value Layer	126
7.3.2 Tenth-Value Layer	133
7.3.3 Polyenergetic Beams of Photons	134
7.4 Review Questions	135
7.5 Problems	135

Chapter 8

Principles Governing Specific Devices: Good Working Habits	137
8.1 Responsibility	137
8.2 Facility Design	138
8.3 Quality Assurance	138
8.4 Specific Recommendations for X-Ray Generating Equipment	142
8.4.1 Leakage, Beam Size Definition, and Beam Filtration	142
8.4.2 Control Devices	143
8.4.3 Protection of Patient and Operators	144
8.4.3.1 Protective Clothing	146
8.5 Specific Recommendations for Sealed Sources of Radioactivity	146
8.5.1 Collimated Sealed Sources	146
8.5.2 Noncollimated Sealed Sources	147
8.6 Specific Recommendations for Particle Accelerators	148
8.7 Specific Recommendations for Neutron Generators	149
8.8 Specific Recommendations for Unsealed Sources of Radioactivity	149
8.8.1 Common External Sources of Irradiation	150
8.8.2 Protection from External Sources of Irradiation	150
8.8.3 Common Internal Sources of Irradiation	152
8.8.4 Common Methods of Acquiring Internal Irradiation Sources	154
8.8.4.1 Inhalation	154
8.8.4.2 Ingestion	156
8.8.4.3 Absorption	157
8.8.5 Protection from Internal Sources of Irradiation	157
8.8.6 Specific Contamination Control Devices	159
8.8.6.1 Shields	159
8.8.6.2 Remote Handling Equipment	160
8.8.6.3 Decontamination Equipment	161
8.8.7 Management of Accidents	162
8.8.7.1 Confinement	162
8.8.7.2 Area Decontamination	162
8.8.7.3 Personnel Decontamination	163
8.9 Review Questions	164
8.10 Problems	166

Chapter 9

Radionuclides and the Law	167
9.1 Licensing	167
9.1.1 Nuclear Regulatory Commission	168
9.1.2 Radiation Control for Health and Safety Act of 1968	168
9.1.3 Authorization	169
9.2 Record Keeping	171
9.3 Area Posting and Radionuclide Labeling	172
9.4 Storage and Delivery	174
9.5 Transport	175
9.6 Radionuclides and Animals	177
9.7 Waste Disposal	177
9.8 Review Questions	179
9.9 Problems	180

Chapter 10

Shielding from External Radiation	181
10.1 Protection from External Unsealed γ -Ray Photons	182
10.2 Protection from Sources of X-Ray and Annihilation Photons	186
10.2.1 Primary Barriers	186
10.2.1.1 Weekly Work Load W	186
10.2.1.2 Use Factor U	186
10.2.1.3 Occupancy Factor T	187
10.2.1.4 Photon Energy	187
10.2.2 Scattered Radiation	189
10.2.3 Leakage Radiation	192
10.2.3.1 Scattered Radiation from CT Units	195
10.2.4 Special Considerations for PET Units	197
10.2.5 Barriers Against Neutron Generation by Linear Accelerators	197
10.2.6 Special Recommendations for Dental and Veterinary Units	198
10.3 Barriers for Sealed-Sources	198
10.4 Collimation	199
10.5 Review Questions	202
10.6 Problems	204

Chapter 11

Internal Dosimetry	205
11.1 Mean Absorbed Dose	205
11.2 Effective Half-Life	211
11.3 Accumulated Activity and Residence Time	213
11.4 Use of the MIRD Tables	219
11.5 Review Questions	221
11.6 Problems	222

Chapter 12	
Absorbed Dose from External Photons	223
12.1 Kerma and Absorbed Dose in Air	223
12.2 Absorbed Dose to a Small Mass of Tissue Exposed in Free Space	224
12.2.1 A_{eq} and r_{eq}	225
12.2.2 f Factor	225
12.3 The Bragg-Gray Principle	226
12.4 Other Absorbed Dose Calculation Methods	230
12.5 Absorbed Dose in Selected Diagnostic X-Ray Procedures	230
12.6 Conclusions	233
12.7 Review Questions	234
12.8 Problems	234
Appendix A	235
The Units of Physics	235
Appendix B	239
The Roentgen and the Rad	239
B.1 The Roentgen	239
B.2 The Rad	239
B.3 Equivalence between Roentgen and Rad	240
Appendix C	241
Logarithms	241
Appendix D	243
Greek Alphabet	243
Glossary	245
References	281
Answers to Problems	293
Index	297
