Preface to the English Edition	v
Preface	ix
Volume I. The Formation of Atomic Models	1
Chapter 1. Quantum of Radiation	3
1. Thermodynamical Investigation of Black Body Radiation	3
§1. The prehistory of thermal radiation	3
§2. Kirchhoff's law	4
§3. Growth of atomistic viewpoint	6
§4. Stefan-Boltzmann's law	6
§5. Wien's displacement law	8
2. Atomistic Investigations of Black Body Radiation	12
§1. Application of atomism	12
§2. Wien's distribution law	14
§3. Planck's effort	16
§4. Foundation by Planck of Wien's distribution formula	17
§5. Rayleigh's critique based on the theory of vibration	21
§6. Breakdown of the classical theory	23
§7. Planck's new distribution formula	24
§8. Planck's effort to found the new formula	26
§9. Discovery of energy quantum	27
3. Einstein's Light Quantum	33

§1.	Photoelectric effect	33
§2.	Einstein's critique of the classical theory	34
§3.	Derivation of the radiation formula from the classical theory	35
§4.	Einstein's consideration of Planck's theory	37
§5.	Two limits of Planck's formula	38
§6.	Meaning of Wien's formula	38
§7.	Treatment of radiation by means of the kinetic theory of gases	41
§8.	Stokes' law and the light quantum	43
§9.	Photoelectric effect and the light quantum	44
§10.	Ionization of molecule	47
§11.	Einstein's analysis of Planck's theory	48
4.	The Light Quantum and the Theory of Relativity	50
Chapter 2. The Formation of Atomic Models		55
1.	On Line Spectra	55
§1.	Experiments on line spectra	55
§2.	Mathematical law of line spectra	60
§3.	Attempts of deriving spectral laws from dynamical models	66
2.	Ether Model of the Atom	73
§1.	Atomism	73
§2.	Vortex atoms	75
3.	Clarification by the Theory of Electrons	77
§1.	Lorentz's theory of electrons	77
§2.	The Zeeman effect	85
§3.	Explanation by Lorentz's theory of electrons	88
§4.	Experimental verification by Zeeman of Lorentz's theory	91
§5.	Measurement of e/m	93
§6.	Larmor's theory	94
4.	Model of the Atom without Nucleus	100
§1.	Study of cathode rays by J. J. Thomson	100
§2.	Thomson's atomic model in terms of corpuscles	106
§3.	On the electric charge of electron	110
§4.	Kelvin's model of the atom	115
§5.	Permanence and magnetism of atoms	127
§6.	The Thomson model of the atom	138
5.	Model of the Atom with Nucleus	162

§1. Lenard's Dynamiden atom	162
§2. Nagaoka's Saturn-like atom	168
§3. Arguments against Schott's critique	179
6. Examinations of Both Models and the Determination of Atomic Model	182
§1. About the number of electrons in an atom-I	182
§2. Origin of atomic mass	195
§3. Investigations of oscillations in atoms and of intensities of spectral lines	197
§4. The determination by Rutherford	207
§5. About the number of electrons in an atom-II	221
Concluding Remarks	231
Explanatory Notes	234
