| Preface to Volume II | v |
| Volume II. The Way to Quantum Mechanics | 1 |
| Chapter 1. Difficulties in Radiation Theory | 3 |
| 1. Difficulties seen from Statistical Heat Theory | 6 |
| §1. Phenomenological character of Planck's resonator | 6 |
| §2. The contradiction with the equipartition law of energy | 12 |
| §3. Difficulties about Planck's complexion | 15 |
| 2. Molecular Theoretical Significance of the Planck Theory | 19 |
| §1. Atomic vibration model for specific heat of solid body | 19 |
| §2. Theory of specific heat of solids in terms of the quantum theory of sound | 21 |
| 3. Conflict between the Wave and Particle Natures | 25 |
| §1. Fluctuation of radiation energy | 25 |
| §2. Fluctuation of radiation pressure | 30 |
| §3. Conflict between the concepts of light wave and of light quantum | 32 |
| Chapter 2. The Quantum of Action and Atomic Models | 37 |
| 1. Theoretical Significance of the Quantum of Action | 40 |
| §1. The quantum of action and fundamental physical constants | 40 |

| | | |
|-----|-----------------------------------------------------------------------------------|----|
| §2. | The Thomson model of the atom and the quantum of action | 43 |
| §3. | The quantum of action and periodic and aperiodic molecular processes | 46 |
| 2. | The Combination Rule of Spectral Lines | 55 |
| §1. | Ritz's theory of spectral lines | 55 |
| §2. | Ritz's "atomic magnetic field" model | 60 |
| §3. | Ritz's combination rule | 63 |
| 3. | The Quantum of Action and the Angular Momentum | 67 |
| §1. | Nicholson's theory of spectra | 67 |
| §2. | The quantum nature of angular momentum | 74 |
| 4. | The Bohr Model of the Atom | 80 |
| §1. | Characteristic X-rays and frequencies of atomic electrons | 80 |
| §2. | The quantum of action and the fundamental assumptions in the Bohr model | 82 |
| §3. | The spectral formula and the angular momentum | 87 |
| §4. | The permanent state and the angular momentum | 93 |
| §5. | The structure of atoms and molecules | 95 |
| §6. | Moseley's verification of the Bohr model | 99 |

Chapter 3. The Quantum Condition, Transition Probability and Correspondence Principle 103

| | | |
|-----|------------------------------------------------------------------------|-----|
| 1. | The Quantum Condition and Atomic Model | 107 |
| §1. | Wilson's quantum condition | 107 |
| §2. | Ishiwara's quantum condition and the spectral formula | 110 |
| §3. | The quantum theory of hydrogen atom due to Sommerfeld | 114 |
| 2. | The Quantum Condition and the Multiplicity of Spectral Lines | 119 |
| §1. | The quantization of direction | 119 |
| §2. | The relativistic fine structure of spectral line | 123 |
| §3. | The limitation of the quantum condition | 127 |
| §4. | The necessity of selection rules | 128 |
| §5. | The quantum condition and the Stark effect | 132 |
| §6. | The Stark effect and Planck's quantum condition | 135 |
| §7. | The quantum condition and the Zeeman effect | 140 |
| 3. | The Transition Probability | 144 |
| §1. | Two trends of thinking — energetics and atomism | 144 |

| | | |
|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|------------|
| §2. | Understanding of the radiation formula in terms of transition probabilities | 147 |
| §3. | Light-quantum theoretical radiation and molecular recoils | 151 |
| §4. | Demand for a quantum-natured theory of radiation | 155 |
| 4. | The Correspondence Principle | 158 |
| §1. | Angular momentum and the selection rule | 158 |
| §2. | The correspondence principle and selection rule | 160 |
| §3. | The adiabatic hypothesis | 164 |
| §4. | The correspondence principle and adiabatic hypothesis | 166 |
| §5. | The correspondence principle and intensities of spectral lines | 169 |
| Chapter 4. Theory of Atomic Structure and Spin of Electron | | 175 |
| 1. | The Anomalous Zeeman Effect and Half-Integer Quantum Numbers | 179 |
| §1. | Inner quantum numbers and half-integer quantum numbers | 179 |
| §1.1 | Doublet and triplet terms and inner quantum numbers | 179 |
| §1.2 | Anomalous Zeeman effect of doublet and triplet terms and half-integer quantum numbers | 181 |
| §2. | Half-integer quantum numbers and anomalous coefficients of magnetic moment | 184 |
| §2.1 | Half-integer quantum number and “atomic body” | 184 |
| §2.2 | The generalization of g -factor and the anomalous coefficient of magnetic moment | 186 |
| §3. | The magnetomechanical anomaly | 189 |
| §4. | Difficulties about the result of Stern-Gerlach’s experiment | 192 |
| 2. | The Shell Structure in the Configuration of Atomic Electrons | 196 |
| §1. | The valence and the configuration of atomic electrons | 196 |
| §2. | Bohr’s theory of atomic structure | 199 |
| §3. | X-ray spectra and structure of atoms | 204 |
| §4. | Stoner’s revision of Bohr’s configuration of atomic electrons | 209 |
| 3. | The Spin of Electron and the Exclusion Principle | 212 |
| §1. | Pauli’s analysis of the anomalous magnetic moment of the K -shell and the double-ness of the electron | 212 |

| | | |
|---------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|------------|
| §2. | The shell structure of atoms and the exclusion principle of electrons | 215 |
| §3. | The introduction of spin | 218 |
| Chapter 5. The Interconnection of Wave- and Particle-Natures | | 227 |
| 1. | Grasping of Wave Phenomena by Means of the Theory of Light Quantum | 231 |
| §1. | The theory of light quantum and the Doppler effect | 231 |
| §2. | The theory of light quantum and the Compton effect | 234 |
| §3. | The theory of light quantum and the Bragg formula for X-ray reflection | 239 |
| 2. | Light Quantum Theory and de Broglie's Wave Theory | 244 |
| §1. | Quantum condition and Brillouin's theory of inner atomic elastic wave | 244 |
| §2. | From the theory of light quantum to de Broglie's wave theory | 246 |
| §3. | de Broglie's wave and the diffraction and interference of particle | 249 |
| §4. | Theory of light quanta and Bose-Einstein statistics | 252 |
| 3. | Bohr-Kramers-Slater's Theory and the Negation by Compton-Simon's Experiment | 262 |
| §1. | Slater's idea of virtual radiation | 262 |
| §2. | B-K-S theory of statistical conservation of energy-momentum | 266 |
| §3. | Compton-Simon's experiment (Confirmation of the energy-momentum conservation in an elementary process) | 268 |
| 4. | Theory of Dispersion of Light | 272 |
| §1. | Transition probabilities and the theory of dispersion of light | 272 |
| §2. | The theory of light quanta and the dispersion theory | 277 |
| | Postscript | 285 |
