<i>Preface to the Second Edition</i>	vii
<i>Preface</i>	ix
1. Introduction	1
1.1 Historical Review . . . . .	3
1.2 Plan of the Book . . . . .	12
References . . . . .	15
2. Fractional Statistics in Two Dimensions	19
2.1 Introduction . . . . .	19
2.2 Why Fractional Spin? . . . . .	20
2.3 Why Fractional Statistics? . . . . .	21
2.4 Basic Properties of Anyons . . . . .	29
2.5 Flux Tube Model of Anyons . . . . .	32
2.6 The Braid Group . . . . .	38
References . . . . .	42
3. Quantum Mechanics of Anyons	43
3.1 Introduction . . . . .	43
3.2 Two Noninteracting Anyons . . . . .	44
3.3 Two Anyons in an Oscillator Potential . . . . .	47
3.4 Two Anyons in a Uniform Magnetic Field . . . . .	51
3.5 Magnetic Field with Coulomb Repulsion . . . . .	57
3.6 Scattering of Two Anyons in Coulomb Field . . . . .	58
3.7 Scattering of Two Anyons with Hard-Disk Repulsion . . . . .	62
3.8 $N$ Anyons in an Oscillator Potential . . . . .	65

3.9	Three-Anyon Ground State . . . . .	69
3.10	General Results for $N$ Anyons . . . . .	77
3.11	$N$ Anyons Experiencing a $N$ -body Potential . . . . .	83
3.12	$N$ Anyons in a Uniform Magnetic Field . . . . .	87
3.13	Pseudo-Integrability of $N$ Anyon System . . . . .	95
3.14	Quantum Computing and Anyons . . . . .	96
	References . . . . .	100
4.	Statistical Mechanics of an Ideal Anyon Gas . . . . .	103
4.1	Introduction . . . . .	103
4.2	Ideal Fermi Gas in Two Dimensions . . . . .	104
4.3	Ideal Bose Gas in Two Dimensions . . . . .	110
4.4	Ideal Anyon Gas: Second Virial Coefficient . . . . .	115
4.5	Ideal Anyon Gas: Third Virial Coefficient . . . . .	130
4.6	Ideal Anyon Gas: Higher Virial Coefficients . . . . .	140
	References . . . . .	142
5.	Fractional Exclusion Statistics . . . . .	145
5.1	Introduction . . . . .	145
5.2	Distribution Function . . . . .	146
5.3	Thermodynamics of an Ideal Gas . . . . .	150
5.4	Negative Probabilities . . . . .	157
5.5	Gentile Statistics . . . . .	159
5.6	New Fractional Exclusion Statistics . . . . .	162
	References . . . . .	164
6.	Introduction to the Chern-Simons Term . . . . .	167
6.1	Introduction . . . . .	167
6.2	What is the Chern-Simons Term? . . . . .	168
6.3	Gauge Invariant Mass Term . . . . .	170
6.4	Behavior Under $C$ , $P$ , and $T$ . . . . .	172
6.5	Coleman-Hill Theorem . . . . .	173
6.6	Magneto-Electric Effect . . . . .	175
6.7	Chern-Simons Term by SSB . . . . .	175
6.8	Lorentz Invariance from Gauge Invariance . . . . .	176
6.9	Quantization of Chern-Simons Mass . . . . .	177
6.10	Parity Anomaly . . . . .	181
6.11	Topological Field Theory . . . . .	182

References . . . . .	183
7. Soliton as Anyon in Field Theories . . . . .	185
7.1 Introduction . . . . .	185
7.2 Charged Vortex Solutions . . . . .	186
7.3 Relativistic Chern-Simons Vortices . . . . .	197
7.4 Non-relativistic Chern-Simons Vortices . . . . .	208
7.5 $CP^1$ Solitons with Hopf Term . . . . .	213
References . . . . .	217
8. Anyons as Elementary Field Quanta . . . . .	221
8.1 Introduction . . . . .	221
8.2 Non-relativistic Field Theories . . . . .	222
8.3 Relativistic Field Theories . . . . .	231
References . . . . .	237
9. Anyon Superconductivity . . . . .	239
9.1 Introduction . . . . .	239
9.2 Mean Field Theory . . . . .	242
9.3 The Random Phase Approximation . . . . .	245
9.4 The Effective Lagrangian . . . . .	249
9.5 Anyons and High- $T_c$ Superconductivity . . . . .	251
9.6 Anyon Metal . . . . .	253
References . . . . .	254
10. Quantum Hall Effect and Anyons . . . . .	257
10.1 Introduction . . . . .	257
10.2 The Landau Levels . . . . .	259
10.3 Basics of Quantum Hall Effect . . . . .	261
10.4 Trial Wave Function and Anyons . . . . .	264
10.5 Mean Field Theory . . . . .	278
References . . . . .	285
11. Omitted Topics . . . . .	287
References . . . . .	293
<i>Index</i> . . . . .	297
