0	Introduction	1
1	Mathematical description of a physical system	7
1.1	Atomic physics and the crisis of classical mechanics	7
1.2	Mathematical description of classical Hamiltonian systems	10
1.3	General mathematical description of a physical system	16
1.4	Appendix A : C^* -algebras	24
1.5	Appendix B: Abelian C^* -algebras	26
1.6	Appendix C: Spectra and states	30
2	Mathematical description of a quantum system	37
2.1	Heisenberg uncertainty relations and non-abelianess	37
2.2	States and representations. GNS construction	40
2.3	Gelfand-Naimark theorem: observables as operators	44
2.4	The probabilistic interpretation. *Quantum probability	46
2.5	*Quantum logic	52
2.6	Appendix D: States and representations	54
2.7	*Appendix E: Von Neumann algebras	55
3	The quantum particle	57
3.1	The Weyl algebra and the Heisenberg group	57
3.2	Von Neumann uniqueness theorem	60
3.3	The Schroedinger representation and wave function	63
3.4	Gaussian states. Minimal Heisenberg uncertainty	65
4	Quantum dynamics. The Schroedinger equation	67
4.1	Quantum dynamics. The quantum Hamiltonian	67
4.2	The dynamics of a free quantum particle	70
4.3	Quantum particle in a potential	71
4.4	Appendix F: Hamiltonian self-adjointness and dynamics	74

5	Examples	81
5.1	Double-slit interference and particle-wave duality	81
5.2	The quantum harmonic oscillator. Energy quantization . . .	82
5.3	Quantum particle in a square potential well and in a box . .	85
5.4	Quantization of the angular momentum. The spin	87
5.5	The Hydrogen atom	90
5.6	Appendix G: Properties of the Runge-Lenz operator	94
6	*Quantum mechanics and stochastic processes	95
6.1	Quantum mechanics, probability and diffusion	95
6.2	The Feynman path integral	99
6.3	The Feynman-Kac formula	104
6.4	Nelson positivity and uniqueness of the ground state	107
6.5	Quantum mechanics and stochastic processes	108
6.6	Euclidean quantum mechanics	112
6.7	Applications of the functional integral	116
6.7.1	Feynman perturbative expansion	116
6.7.2	Semiclassical limit	118
6.7.3	Ground state properties	121
6.7.4	Coupling constant analyticity	122
6.8	Functional integral and topology	124
6.9	Appendix H: The central limit theorem	134
6.10	Appendix I: Gaussian variables. Wick's theorem	135
6.11	Appendix J: Stochastic processes and functional integrals . .	137
6.12	Appendix K: Wiener process	140
	Index	143
