Preface	v
<b>Chapter 1 Why Quantum Fluctuations of Spacetime?</b>	<b>1</b>
1.1 Quantum Fluctuations and Spacetime	9
1.2 Detecting Quantum Gravity Fluctuations	14
1.3 Connections to Strings and Membranes	18
1.4 Beyond Standard Constructions	19
<b>Chapter 2 Quantum Fluctuations and Spacetime</b>	<b>21</b>
2.1 Introduction	21
2.2 Fluctuations in Quantum Mechanics	22
2.3 ADM Relativity, the Wheeler-DeWitt Equation and Torsional Fluctuations	34
2.4 Thermalized Torsional Fluctuations	41
2.5 Squeezed States, Wormholes and Nascent Cosmologies	49
2.6 Spacetime Fluctuations and Wormholes	53
2.7 The Geometry of Quantum Mechanics	65
2.7.1 Projective Structure in Spacetime and Quantum Mechanics	66
2.7.2 Bell's Inequality, Metrics and Expectation	69
2.7.3 The Hilbert Space $CP^2$ and Lorentz Group $PSO(5,1)$	73
2.7.4 Quantum Geometry and Extended Field Theories	75
2.8 Quantum Computing Backwards in Time and $P \subset NP$	76
2.9 Summary on Spacetime Fluctuations	81
<b>Chapter 3 Detection of Quantum Gravity Fluctuations</b>	<b>85</b>
3.1 Can Quantum Gravity Be Experimentally Tested?	85
3.2 Atomic Detection of Quantum Spacetime Fluctuations	87
3.3 Detecting Virtual Black Holes	99
3.4 Quantum Optical Detection of Quantum Gravity Induced Decoherence	102
3.5 Ring Gyro Test of the Holographic Principle	106
3.6 Measurement of Unruh-Hawking Physics with Bose-Einstein Condensates	110
3.7 Testing Gravitational Squeezing of the Vacuum State	114

3.8	Cosmological Gravity Waves	118
3.9	The Universe as a $\Sigma(all) = 0$	125
<b>Chapter 4</b>	<b>Quantum Gravity Fluctuations, Strings and Two Dimensional D-Branes</b>	<b>139</b>
4.1	Quantum Gravity Fluctuations in Modern Physics	139
4.2	Finite Temperature Theory of Rotating Strings	141
4.3	Nonlinear Spacetime Transformations, Quantum Theory and Gravity	149
4.4	Overview of Basic Topological Field Theory	154
4.5	Supersymmetry and Cohomology of the Horizon Algebra	160
4.6	Moduli Space Constructions of Horizons	167
4.7	Brane Dynamics and Black Holes	181
4.8	Supersymmetric Moduli Space	182
4.9	Moduli Spaces With Non-Hausdorff Zariski Topology	184
4.10	Modularity and Fractal Aspects of Moduli with Zariski Topology	188
4.11	Julia Sets and NonHausdorff Measures over Moduli Spaces	190
<b>Chapter 5</b>	<b>Topology, Extra Large Dimensions and the Higgs Field</b>	<b>193</b>
5.1	Extra Dimensions and the Horizon $D2$ -Brane and $D5$ -Brane	193
5.2	Time Symmetry and Violations of Topological Quantum Numbers	200
5.3	TEV Physics From D-Branes and the Higgs Field	206
5.4	Quantum Group Structure With Ricci Flows and Three-Manifold Surgery	218
<b>Chapter 6</b>	<b>Zeta Functions, Topological Quantum Numbers and M-Theory</b>	<b>228</b>
6.1	Wrapped Spaces and Internal Symmetries	232
6.2	Instantons Between String Types, Topology, and Vacuum Ambiguity	233
6.3	String Types, M-Theory and Octonions	237
<b>Chapter 7</b>	<b>The Generalized Uncertainty Principle</b>	<b>243</b>
7.1	The Vacuum Problem	243
7.2	Differential Structure of Fields in Spacetime	245
7.3	Nonlocalizability of Energy and Noncommutative Geometry	251

7.4	Quantization of Fields in Spacetime and Noncommutative Geometry	254
7.5	Connections to One-Loop Quantum Gravity	259
7.6	The Noncommutative Algebra	262
7.7	General Relativity and Quantum Mechanics as Subsets of a Single Theory	265
7.8	A Proposed General Mathematics for the $B^*$ Algebra	268
7.9	Concluding Words	274
<b>Chapter 8 Octonionic Quantum Gravity</b>		<b>276</b>
8.1	Algebra and Basis Elements	276
8.2	Triality and Right/Left Eigenvectors Over $\mathcal{O}$	281
8.3	Quantum Mechanical Interpretation	282
8.4	Eigenvalues, Clifford Algebras and Quaternions	283
8.5	Holographic Principle from the Quantum Theory of Spin	285
8.6	Associative and Co-Associative SubAlgebra and Spacetime	292
8.7	Polyhedra and Jordan Algebraic Representations of Octonions	295
8.8	Nonassociative Fields and Topological Supersymmetry	299
8.9	Bohr's Gravitization of the Quantum	304
8.10	Quantum Black Holes as Strings and Error Correction Algorithms	310
8.11	Quantum States for Hamming and Golay Error Correction Codes	316
8.12	Phase Structure of Black Holes	322
8.13	Higher Polyhedral Representations	328
<b>Chapter 9 Physical Law from No Law</b>		<b>333</b>
9.1	Universal Computation In Quantum Cosmology and the Decidability of Cosmic Censorship	334
9.2	PreGeometry and Mathematical Undecidability	339
9.3	Recovering Geometry From PreGeometry	348
9.4	Gödel's Theorem In Quantum Mechanics	355
9.5	The Anthropic Cosmological Principle? — Maybe	359
