

Table of contents

1 Introductory Experiments	1
Introduction	3
1.1. Free fall	9
1.2. Interference of sound waves	12
1.3. Charging and discharging a capacitor	15
1.4. I - U characteristics	18
1.5. Lissajous patterns	20
1.6. Determination of short time intervals	23
1.7. Characteristics of a DC source	25
1.8. Oersted's great discovery	28
1.9. Magnetic field measurements	31
1.10. Magnetic force	36
1.11. Helmholtz coils	39
1.12. Faraday's law of induction	43
1.13. Lenz's rule	48
1.14. Electric power in AC circuits	54
1.15. Electrical filters	58
1.16. Probability functions	62
1.17. Photometric laws	65
1.18. Kirhhoff's rule	68
1.19. Malus' law	72
1.20. Irradiance and illuminance	75
2 Mechanics and Molecular Physics	77
2.1. Velocity of sound in air	79
2.2. Pendulum	84

2.3. Tuning fork	93
2.4. Doppler effect	100
2.5. Nonlinear dynamics	103
2.6. Light bulb	108
2.7. Pulse calorimetry	111
2.8. Principles of modulation calorimetry	124
2.9. Heat of vaporization	131
2.10. Phase diagram of nitrogen	135
3 Electricity and Magnetism	139
3.1. Rotating magnetic field	141
3.2. <i>LCR</i> circuit	149
3.3. Skin effect	161
3.4. Eddy currents	167
3.5. Spectra of electrical signals	177
3.6. Correlation analysis	183
3.7. Thermal noise	191
3.8. Lock-in detection	195
3.9. Ampère's circuital law	203
3.10. Transformer	207
4 Optics and Atomic Physics	219
4.1. Interference of light	221
4.2. Diffraction of light	226
4.3. Optical communication	236
4.4. Polarization of light	243
4.5. Faraday effect	248
4.6. Spectrophotometry	254
4.7. Speed of light	257
4.8. Thermal radiation	267
4.9. Hydrogen atom	277
4.10. Photoluminescence	282

5 Condensed Matter Physics	287
5.1. Equilibrium point defects in metals	289
5.2. Conductivity of solids. The Hall effect	297
5.3. Semiconductor electronics	303
5.4. Photovoltaic effect	309
5.5. Ferromagnetism	317
5.6. Curie point	330
5.7. Dielectric constant	342
5.8. Thermoelectric phenomena	349
6 Nobel Prize Experiments	359
6.1. Electron	361
6.2. Michelson interferometer	371
6.3. Principles of radio	379
6.4. Photoelectric effect	389
6.5. Franck–Hertz experiment	397
6.6. Thermionic emission	403
6.7. Transistor	418
6.8. Superconductivity	425
7 Student Projects	441
7.1. Moving-coil meter as a pendulum	443
7.2. Velocity of sound versus temperature	445
7.3. Hot-wire anemometry	447
7.4. Direct readout of resistivity	449
7.5. Contactless measurement of conductivity	451
7.6. Stokes viscometer	453
7.7. Metal detection and the Theremin	455
7.8. Recording magnetometer	462
7.9. Lock-in detector in a matchbox	465
7.10. Noise reduction by averaging technique	469
7.11. Detection of thermal radiation	473
7.12. Optical communication	476
7.13. Percolation	478

7.14. Clamp-on ammeter	480
7.15. Curie point	482
7.16. Simple electro-musical instruments	485
7.17. Two-stage Peltier cooler	487
7.18. Absolute temperature scale	489
7.19. Cavendish experiment	491
7.20. Demonstrations with a microscope	493
7.21. Diamagnetism of superconductors	495
7.22. Poisson spot	497
References	499
