<i>Preface</i>	vii
1. Euclidean Geometry and Vectors	1
1.1 Euclidean Geometry . . . . .	1
1.1.1 The Postulates of Euclid . . . . .	1
1.1.2 Relative Position and Position Vectors . . . . .	3
1.1.3 Euclidean Space as a Linear Space . . . . .	4
1.2 Vector Operations . . . . .	9
1.2.1 Inner Product . . . . .	9
1.2.2 Cross Product . . . . .	17
1.2.3 Scalar Triple Product . . . . .	23
1.3 Curves in Space . . . . .	24
1.3.1 Vector-Valued Functions of a Scalar Variable . . . . .	24
1.3.2 The Tangent Vector and Arc Length . . . . .	27
1.3.3 Frenet's Formulas . . . . .	30
1.3.4 Velocity and Acceleration . . . . .	33
2. Vector Analysis and Classical and Relativistic Mechanics	39
2.1 Kinematics and Dynamics of a Point Mass . . . . .	39
2.1.1 Newton's Laws of Motion and Gravitation . . . . .	39
2.1.2 Parallel Translation of Frames . . . . .	46
2.1.3 Uniform Rotation of Frames . . . . .	48
2.1.4 General Accelerating Frames . . . . .	61
2.2 Systems of Point Masses . . . . .	66
2.2.1 Non-Rigid Systems of Points . . . . .	66
2.2.2 Rigid Systems of Points . . . . .	73

2.2.3	Rigid Bodies . . . . .	79
2.3	The Lagrange–Hamilton Method . . . . .	84
2.3.1	Lagrange’s Equations . . . . .	85
2.3.2	An Example of Lagrange’s Method . . . . .	90
2.3.3	Hamilton’s Equations . . . . .	93
2.4	Elements of the Theory of Relativity . . . . .	95
2.4.1	Historical Background . . . . .	97
2.4.2	The Lorentz Transformation and Special Relativity . . . . .	99
2.4.3	Einstein’s Field Equations and General Relativity . . . . .	105
3.	Vector Analysis and Classical Electromagnetic Theory . . . . .	121
3.1	Functions of Several Variables . . . . .	121
3.1.1	Functions, Sets, and the Gradient . . . . .	121
3.1.2	Integration and Differentiation . . . . .	130
3.1.3	Curvilinear Coordinate Systems . . . . .	141
3.2	The Three Integral Theorems of Vector Analysis . . . . .	150
3.2.1	Green’s Theorem . . . . .	150
3.2.2	The Divergence Theorem of Gauss . . . . .	151
3.2.3	Stokes’s Theorem . . . . .	155
3.2.4	Laplace’s and Poisson’s Equations . . . . .	157
3.3	Maxwell’s Equations and Electromagnetic Theory . . . . .	163
3.3.1	Maxwell’s Equations in Vacuum . . . . .	163
3.3.2	The Electric and Magnetic Dipoles . . . . .	170
3.3.3	Maxwell’s Equations in Material Media . . . . .	173
4.	Elements of Complex Analysis . . . . .	179
4.1	The Algebra of Complex Numbers . . . . .	179
4.1.1	Basic Definitions . . . . .	179
4.1.2	The Complex Plane . . . . .	183
4.1.3	Applications to Analysis of AC Circuits . . . . .	187
4.2	Functions of a Complex Variable . . . . .	190
4.2.1	Continuity and Differentiability . . . . .	190
4.2.2	Cauchy-Riemann Equations . . . . .	191
4.2.3	The Integral Theorem and Formula of Cauchy . . . . .	194
4.2.4	Conformal Mappings . . . . .	202
4.3	Power Series and Analytic Functions . . . . .	206
4.3.1	Series of Complex Numbers . . . . .	206
4.3.2	Convergence of Power Series . . . . .	208

4.3.3	The Exponential Function . . . . .	213
4.4	Singularities of Complex Functions . . . . .	215
4.4.1	Laurent Series . . . . .	215
4.4.2	Residue Integration . . . . .	222
4.4.3	Power Series and Ordinary Differential Equations . . . . .	231
5.	Elements of Fourier Analysis . . . . .	241
5.1	Fourier Series . . . . .	241
5.1.1	Fourier Coefficients . . . . .	242
5.1.2	Point-wise and Uniform Convergence . . . . .	247
5.1.3	Computing the Fourier Series . . . . .	254
5.2	Fourier Transform . . . . .	261
5.2.1	From Sums to Integrals . . . . .	261
5.2.2	Properties of the Fourier Transform . . . . .	267
5.2.3	Computing the Fourier Transform . . . . .	271
5.3	Discrete Fourier Transform . . . . .	274
5.3.1	Discrete Functions . . . . .	274
5.3.2	Fast Fourier Transform (FFT) . . . . .	278
5.4	Laplace Transform . . . . .	281
5.4.1	Definition and Properties . . . . .	281
5.4.2	Applications to System Theory . . . . .	285
6.	Partial Differential Equations of Mathematical Physics . . . . .	291
6.1	Basic Equations and Solution Methods . . . . .	291
6.1.1	Transport Equation . . . . .	291
6.1.2	Heat Equation . . . . .	294
6.1.3	Wave Equation in One Dimension . . . . .	307
6.2	Elements of the General Theory of PDEs . . . . .	316
6.2.1	Classification of Equations and Characteristics . . . . .	316
6.2.2	Variation of Parameters . . . . .	321
6.2.3	Separation of Variables . . . . .	325
6.3	Some Classical Partial Differential Equations . . . . .	333
6.3.1	Telegraph Equation . . . . .	333
6.3.2	Helmholtz's Equation . . . . .	338
6.3.3	Wave Equation in Two and Three Dimensions . . . . .	343
6.3.4	Maxwell's Equations . . . . .	347
6.3.5	Equations of Fluid Mechanics . . . . .	353
6.4	Equations of Quantum Mechanics . . . . .	356

6.4.1	Schrodinger's Equation . . . . .	356
6.4.2	Dirac's Equation of Relativistic Quantum Mechanics	373
6.4.3	Introduction to Quantum Computing . . . . .	379
6.5	Numerical Solution of Partial Differential Equations . . . . .	390
6.5.1	General Concepts in Numerical Methods . . . . .	391
6.5.2	One-Dimensional Heat Equation . . . . .	395
6.5.3	One-Dimensional Wave Equation . . . . .	398
6.5.4	The Poisson Equation in a Rectangle . . . . .	401
6.5.5	The Finite Element Method . . . . .	403
7.	Further Developments and Special Topics	409
7.1	Geometry and Vectors . . . . .	409
7.2	Kinematics and Dynamics . . . . .	413
7.3	Special Relativity . . . . .	422
7.4	Vector Calculus . . . . .	426
7.5	Complex Analysis . . . . .	430
7.6	Fourier Analysis . . . . .	436
7.7	Partial Differential Equations . . . . .	440
8.	Appendix	451
8.1	Linear Algebra and Matrices . . . . .	451
8.2	Ordinary Differential Equations . . . . .	455
8.3	Tensors . . . . .	455
8.4	Lumped Electric Circuits . . . . .	463
8.5	Physical Units and Constants . . . . .	465
	<i>Bibliography</i>	467
	<i>List of Notations</i>	471
	<i>Index</i>	473
