<i>Preface</i>	xi
1. HISTORICAL BACKGROUND	1
1.1 Sturm-Liouville theory	1
1.2 The introduction of Sturmians into quantum theory	2
1.3 One-electron Coulomb Sturmians	3
1.4 Generalized Sturmians and many-particle problems	5
1.5 Use of generalized Sturmian basis sets to solve the many-particle Schrödinger equation	6
2. MOMENTUM SPACE AND ITERATION	9
2.1 The d -dimensional Schrödinger equation in momentum space	9
2.2 Momentum-space orthonormality relations for Sturmian basis sets	11
2.3 Sturmian expansions of d -dimensional plane waves	13
2.4 Iteration of the Schrödinger equation	14
2.5 Generation of symmetry-adapted basis functions by iteration	16
2.6 Solutions to the Sturmian secular equations obtained entirely by iteration	17
3. GENERALIZED STURMIANS APPLIED TO ATOMIC SPECTRA	19
3.1 Goscinkian configurations with weighted nuclear charges	19
3.2 Derivation of the secular equations	24
3.3 Symmetry-adapted basis sets for the 2-electron isoelectronic series	26

3.4	The large- Z approximation	31
3.5	General symmetry-adapted basis sets derived from the large- Z approximation	43
3.6	Symmetry-adapted basis functions from iteration	44
4.	AUTOIONIZING STATES	47
4.1	Electron correlation and the molecule-like character of autoionizing states	47
4.2	Calculation of autoionizing states using generalized Sturmians	47
4.3	Higher series of 3S autoionizing states	51
5.	CORE IONIZATION	57
5.1	Core ionization energies in the large- Z approximation	57
5.2	Isonuclear series; piecewise-linear dependence of ΔE on N	60
5.3	Core ionization energies for the 3-electron isoelectronic series	61
6.	STRONG EXTERNAL FIELDS	69
6.1	External electric fields	69
6.2	Anomalous states	70
6.3	Polarizabilities	75
6.4	Induced transition dipole moments	75
6.5	External magnetic fields	76
7.	RELATIVISTIC EFFECTS	79
7.1	Lorentz invariance and 4-vectors	79
7.2	The Dirac equation for an electron in an external electromagnetic potential	81
7.3	Time-independent problems	82
7.4	The Dirac equation for an electron in the field of a nucleus	83
7.5	Relativistic formulation of the Zeeman and Paschen-Bach effects	88
7.6	Relativistic many-electron Sturmians	90
7.7	A simple example	95
7.8	Fine structure of spectral lines	101
8.	MOMENTUM SPACE; THE FOCK TRANSFORMATION	107
8.1	One-electron Coulomb Sturmians in direct space	107
8.2	Fourier transforms of Coulomb Sturmians	108
8.3	The Fock projection; Hyperspherical harmonics	110
8.4	The momentum-space orthonormality relations revisited	111

9.	HARMONIC POLYNOMIALS	117
9.1	Monomials, homogeneous polynomials, and harmonic polynomials	117
9.2	The canonical decomposition of a homogeneous polynomial	119
9.3	Generalized angular momentum	122
9.4	Hyperangular integration	124
10.	HYPERSPHERICAL HARMONICS	129
10.1	The relationship between harmonic polynomials and hyperspherical harmonics	129
10.2	Construction of hyperspherical harmonics by means of harmonic projection	131
10.3	Hyperspherical harmonics in a 4-dimensional space	132
10.4	Gegenbauer polynomials	134
10.5	Hyperspherical expansion of a d -dimensional plane wave .	136
10.6	Alternative hyperspherical harmonics; The method of trees	139
11.	THE MANY-CENTER PROBLEM	153
11.1	The many-center one-electron problem	153
11.2	Shibuya-Wulfman integrals	154
11.3	Shibuya-Wulfman integrals and translations	156
11.4	Matrix elements of the nuclear attraction potential	157
11.5	The Sturmian secular equations for an electron moving in a many-center potential	158
11.6	Molecular spectra	161
Appendix A	INTERELECTRON REPULSION INTEGRALS	167
A.1	Procedure for evaluating the interelectron repulsion matrix	167
A.2	Separation of the integrals into radial and angular parts .	168
A.3	Evaluation of the radial integrals in terms of hypergeometric functions	169
A.4	Evaluation of the angular integrals by harmonic projection	170
A.5	Relativistic interelectron repulsion integrals	172
Appendix B	GENERALIZED SLATER-CONDON RULES	175
B.1	Introduction	175
B.2	Slater determinants expressed in terms of the antisymmetrizer	175
B.3	Scalar products between configurations	176
B.4	One-electron operators	177
B.5	Two-electron operators	178

Appendix C	EXPANSION OF $F(r)$ ABOUT ANOTHER CENTER	181
C.1	Expansion of a displaced function of r in terms of Gegenbauer polynomials	181
C.2	Expansion of plane waves using Gegenbauer polynomials .	182
C.3	Explicit expressions for the displaced function in terms of integrals over Bessel functions	183
C.4	An alternative method, illustrated for the case where $d = 3$	184
C.5	Closed-form differential expressions in terms of modified spherical Bessel functions	186
Appendix D	THE FOCK PROJECTION	187
D.1	The one-electron Schrödinger equation in momentum space	187
D.2	The momentum-space wave equation for hydrogenlike atoms	188
D.3	Projection of momentum-space onto a 4-dimensional hypersphere	188
D.4	Expansion of the kernel in terms of hyperspherical harmonics	190
Appendix E	THE GREEN'S FUNCTION OF THE SCHRÖDINGER EQUATION	193
E.1	The operator $-\Delta + p_{\kappa}^2$ and its Green's function	193
E.2	Conservation of symmetry under Fourier transformation .	194
E.3	Conservation of symmetry under Green's function iteration	195
E.4	Alternative representations of the Green's function	196
Appendix F	CONFIGURATIONS BASED ON COULOMB STURMIAN ORBITALS	201
F.1	Coulomb Sturmian spin-orbitals	201
F.2	Generalized Shibuya-Wulfman integrals	203
F.3	An illustrative example	204
F.4	Ground states for the 2-electron isoelectronic series	205
F.5	Generalization to molecular problems	206
Appendix G	NOTATION	209
	<i>Bibliography</i>	213
	<i>Index</i>	233
