<i>Preface</i>	vii
1. Introduction: Historical Background	1
1.1 Multiphoton Physics	2
1.2 Single-Electron Interaction with Intense Electromagnetic Fields	3
1.3 Nonlinear Wave Propagation	4
1.4 Metal Optics	5
1.5 Long Pulse Laser-Plasma Interactions	6
1.6 Femtosecond Lasers	9
2. Interaction with Single Atoms	17
2.1 Multiphoton Ionization	18
2.2 Tunneling Ionization	20
2.3 Residual Energy	23
2.4 Ionization-Induced Defocusing	24
2.5 High Harmonic Generation in Gases	27
3. Interaction with Single Electrons	31
3.1 Motion of an Electron in an Electromagnetic Plane Wave .	31
3.1.1 Laboratory frame	33
3.1.2 Average rest frame	34
3.1.3 Finite pulse duration	36
3.2 Ponderomotive Force	36
3.3 Ejection from Focused Laser Beam	39
3.4 Vacuum Acceleration Schemes	42

3.5	Relativistic Thomson Scattering	44
3.6	Nonlinear Compton Scattering	50
4.	Laser Propagation in Underdense Plasmas	55
4.1	Nonlinear Plane Waves in a Cold Plasma	56
4.2	Wavebreaking	61
4.3	Wakefield Generation	64
4.3.1	Small pump strengths	65
4.3.2	The quasistatic approximation	67
4.3.3	Arbitrary pump strengths	71
4.3.4	Beat waves	78
4.4	Instabilities	83
4.4.1	Forward Raman scattering	89
4.4.2	Backward Raman scattering	89
4.5	Harmonic Generation in Underdense Plasmas	90
4.6	Propagation of Finite-Width Laser Pulses	96
4.6.1	Geometric optics picture of self-focusing	97
4.6.2	The nonlinear Schrödinger equation	99
4.6.3	Ponderomotive channel formation	106
4.7	Dynamics of Relativistic Self-Focusing	109
4.7.1	Numerical solutions of the wave-envelope equation	109
4.7.2	Guiding of short pulses	110
4.7.3	Particle-in-cell simulations	113
4.8	Experiments on Relativistic Laser Propagation	115
4.8.1	Homogeneous plasmas	116
4.8.2	Preformed, inhomogeneous plasmas	119
4.9	Magnetic Field Generation	120
5.	Interaction with Solids: Overdense Plasmas	127
5.1	Ionization	129
5.2	Collisional Absorption	131
5.2.1	Helmholtz equations	132
5.2.2	Normal skin effect	137
5.3	Heating and Thermal Conduction	142
5.4	Hydrodynamics	149
5.5	Collisionless Absorption	153
5.5.1	Resonance absorption	155
5.5.2	Vacuum heating (Brunel mechanism)	156

5.5.3	Anomalous skin effect	163
5.5.4	Sheath inverse-bremsstrahlung	164
5.5.5	Relativistic $\mathbf{j} \times \mathbf{B}$ heating	166
5.5.6	Absorption measurements	166
5.6	Hot Electron Generation	169
5.6.1	Long pulses	172
5.6.2	Short pulses	175
5.6.3	Measurements of hot electron temperature	177
5.7	Ion Acceleration	180
5.7.1	Long pulse blow-off	181
5.7.2	Forward acceleration	184
5.8	Hole Boring	186
5.9	Magnetic Field Generation	188
5.10	Hot Electron Transport	191
5.10.1	Inhibition by electric fields	192
5.10.2	Magnetic field effects	196
5.10.3	Relativistic currents	197
5.11	Self-Induced Transparency	198
5.12	High Harmonic Generation from Solid Surfaces	200
5.12.1	The moving mirror model	203
5.12.2	Numerical simulations	208
5.12.3	Experiments on harmonic generation	210
6.	Numerical Simulation of Short Pulse Laser Interactions	215
6.1	Plasma Modeling	216
6.2	Finite-Difference Equations	219
6.3	Laser Propagation in Gases	222
6.4	Single Particle Motion in an Electromagnetic Field	226
6.5	Nonlinear Propagation in Underdense Plasmas (NLSE)	228
6.6	Wave Propagation in Overdense Plasmas: Helmholtz Solver	229
6.7	Nonlinear Thermal Transport	234
6.8	Hydrodynamic Simulation	237
6.9	Particle-in-Cell Codes	238
7.	Applications of Short-Pulse Laser-Matter Interactions	243
7.1	Bench-Top Particle Accelerators	243
7.1.1	Electron acceleration	244
7.1.2	Fast ion sources	247

7.2	Soft X-Ray Sources	248
7.2.1	Microscopy	248
7.2.2	EUV Lithography	249
7.3	Hard X-Ray Flash Lamps	249
7.3.1	Biomedical imaging	251
7.3.2	Ultrafast probing of atomic structure	252
7.4	Coherent XUV Radiation	255
7.5	Advanced Fusion Concepts	256
7.6	Laser Nuclear Physics	258
7.6.1	Fusion	259
7.6.2	Fission	261
7.7	A Taste of Things to Come	261
Appendix A List of Frequently Used Symbols		265
Appendix B Slowly Varying Envelope Approximation		267
<i>Bibliography</i>		271
<i>Index</i>		307
