

Trained as a theoretical physicist in the schools of Heisenberg and Pauli, Jagdish Mehra is a distinguished historian of modern physics. His major work (with Helmut Rechenberg, six volumes, nine books) is *The Historical Development of Quantum Theory, 1900–1940*. In 1994 Professor Mehra published *The Beat of a Different Drum: The Life and Science of Richard Feynman*, and he is now working (with Kimball A Milton) on a companion volume, *Climbing the Mountain: The Scientific Biography of Julian Schwinger*. With Arthur Wightman of Princeton University, he has coedited *The Collected Works of Eugene Paul Wigner* in eight volumes.

Professor Mehra has held prestigious academic appointments in Europe and the USA, including the UNESCO – Sir Julian Huxley Distinguished Professorship of History of Science in Trieste, Italy, and Paris, France. He lives in Houston, Texas, USA, where he is associated with the University of Houston.
